# Optimize software use with a value-based audit to close the business enablement gap

About Mphasis:

Mphasis delivers Microsoft Dynamics 365 Finance and Supply Chain Management transformation through a mature, experience-driven approach. Our proven change management expertise ensures successful user adoption, business alignment, and measurable outcomes that last.

WHAT WE OFFER

Mphasis Business Audit reviews selected business areas from a business perspective. We identify Business Enablement Gaps between current business processes, software usage, and your ability to utilize available and evolving features.

The audit covers strategic, management, and operational levels, including employee skills and application usage. It is software agnostic and process-driven, captures pain points across the business and finds ways to mitigate or eliminate them by reducing the Business Enablement Gap.

We evaluate current business needs against applications & features by calculating tangible cost benefits aligned with identified pain points. With an 8-stage feedback process, integrated across the audit timeline, stakeholders remain apprised of the developments at all stages.

We provide a costed Business Audit Report and an Interactive findings presentation to help unlock constrained business processes and improve business responsiveness.

Why Dynamics 365?

Modern applications

Modern applications that deliver new experiences and connect with a business' existing systems to allow organizations to digitally transform their way. Applications that use mixed reality, the ability to take an application that overlays on the reality in front of the user, that guides them through a business process like never before. Connect to information from social networks, mobile devices, and micro-applications to drive intelligence and inform a more effective business process.

Unified data and processes

Unified data and processes that enable business without silos. Centralized data enables disparate groups to work together effectively with a single, trusted view of processes, relationships, and data. Data connectors allow thousands of systems to bring their data to a single network

Intelligence that delivers

Intelligence that delivers actionable insight. Data in the new world includes social, relationship, and productivity information in addition to insights generated by business systems. The right solution requires a unified approach that allows companies to automatically leverage their data to decide and act in real-time with expanded analytics, predictive algorithms, and automated AI.

An extensible environment

An extensible environment that enables change. The right solution establishes a data, communication, and application environment that makes it easy to evolve and extend existing business operations, while introducing technologies that enable users to create solutions where no solution exists and to expand data analysis.

Key use cases

Sales	Service	Finance and operations	Talent	Marketing
Respond to changing business requirements with a flexible platform to rapidly create new solutions and ensure old solutions are never truly finished.	Understand your customers better and respond more quickly by accessing internal and external relationship data.	Increase your return on investment with Microsoft's agile and efficient cloud solution.	Extend your virtual team and coordinate faster with a consolidated view of team members, activities, and responsibilities.	Gain end-to-end visibility by connecting data from external markets, social, and legacy sources.

Microsoft Azure

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.
