

# MUGATO COLLECTOR SERVICE PREREQUISITES

## On-premises requirements to run the Mugato Collector Service

- 4 vCPU and minimum 8GB memory
- Minimum 100 GB OS partition
- Windows Server 2019
  - Windows Server 2012 R2 & 2016 works too
- The server must be a member server joined to Active Directory
- Patched up to the latest level
- The service account of the Mugato Collector service must be able to remote read WMI on the servers in the network, it is limited to these namespaces:
  - root\cimv2
  - root\mscluster
  - root\standardcimv2For Windows Server 2008 R2 and older also:
  - root\Mugato
- Inventoried servers need WMI open on Windows servers from the Mugato Collector service server, the Windows Firewall rules to be enabled are:
  - Windows Management Instrumentation (DCOM-In)
  - Windows Management Instrumentation (WMI-In)
- Before installation the FQDN name of all the Active Directory domains to be inventoried must be sent to Mugato
- TCP port 443 (HTTPS) needs to be open from the Mugato Collector service server towards Azure, no inbound traffic should be allowed
- Downloaded the SQL Server 2019 Express installer to the Mugato server (SQL Server 2017 Express works too):
