REALIZE YOUR CLOUD POTENTIAL

As cloud technologies prevail, it is time for organizations to take advantage of their cloud potential. There are many factors to consider, and decisions are often forced through with limited information available.

CHALLENGES

- Difficult to make informed decisions about how to prioritize in the cloud adoption process.
- Unclear benefits of options offered by cloud vendors.
- Lack of insight into what systems and applications are critical and interdependent.
- Insufficient information about existing digital estate.
- Inadequate communication between business and IT.

IDEAL SOLUTION

- Detailed inventory of the existing digital estate before planning transformation
- Intelligent algorithmic advice with precise recommendations for planning the cloud adoption.
- Improvement through optimization of the existing digital estate before cloud adoption to ensure better utilization of IT resources.
- Continuous monitoring of migration and ability to manage ongoing changes as they occur.

DESIRED OUTCOMES

- An understanding of business applications and their interconnections.
- An accessible data visualization platform to improve dialog between business and IT.
- Continuous monitoring for competent management of cloud environment in the future.
- An always updated fundament of data to provide common ground for collaboration and visual reporting.

MUGATO ENABLES YOU TO

DISCOVER

Understand your digital estate and the interdependencies of your landscape of systems and applications.

PLAN

Plan your cloud adoption based on intelligent algorithmic advice and understand your cloud cost across vendors.

IMPROVE

Enhance your transformation. Optimize your current estate to improve your future IT.
Ensure an optimal cloud environment: optimize resource utilization, reduce spending and mitigate cyber risk before you move to the cloud.

MONITOR

Monitor the progress of your transformation and maintain an overview of your entire IT platform throughout your transition and beyond.
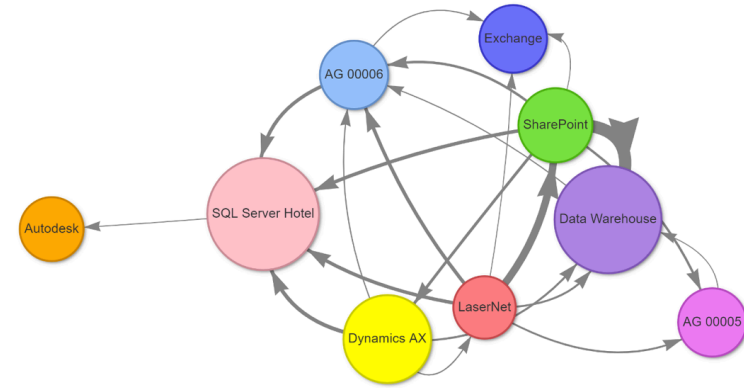

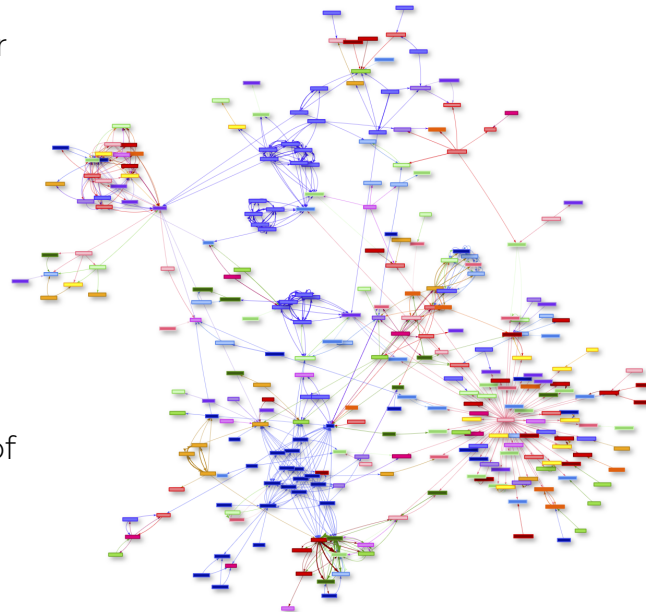

FEATURE HIGHLIGHTS

EXCEPTIONAL IDENTIFICATION & DATA COLLECTION

To successfully transform, it is vital to know your existing platform in detail.

Mugato's collector service provides a comprehensive inventory of your digital estate. The algorithms automatically discover all servers, systems, and applications to provide an exhaustive mapping of connections and interdependencies.

Automatic data collection, intelligent identification, and algorithmic processing to provide the most comprehensive inventory of your digital estate.

FROM SERVER TO APPLICATION VIEW

A new method for you to work intelligently with servers in a recognizable logic: the perspective of applications and functionality across servers.

Mugato clusters your servers based on application interdependencies. A new way of working, where you transform applications instead of individual servers. Make decisions based on the context of application interdependencies and system functionality.

FEATURE HIGHLIGHTS

MODEL YOUR FUTURE INFRASTRUCTURE

As you review and assess your digital estate, you can supplement the algorithmic recommendations with your own decisions and plans.

As your transition progresses, any changes in the estate are automatically registered and reflected in Mugato.

With this continuously updated view, you have an exact representation of your IT environment – a dynamic view of your entire estate both on-premise and in the cloud.

From now on, base your work on an always updated view instead of a historic perspective.

ENHANCE YOUR TRANSFORMATION WITH COST OPTIMIZATION & RESOURCE UTILIZATION

Mugato serves a range of metrics to improve your existing digital estate before you migrate to the cloud.

Metrics for rightsizing allows you to know your capacity, actual utilization, and see all possibilities for server consolidation. Improve your estate by eliminating shadow IT and zombie servers within your environment to optimize costs and operations.

## A CONTINUOUS APPROACH TO TRANSFORMATION

Mugato offers a dynamic model, that ensures your ability to handle change as it occurs. Take a data-driven continuous approach to your transformation and manage your future IT intelligently.

MUGATO & MICROSOFT AZURE

Mugato is built on Azure and runs on Azure. The technologies have mutual benefits. Your data is safe in Mugato on Azure, and Mugato's processing is effective and fast in Azure.

EASE MIGRATION TO AZURE

Mugato helps you transform your IT infrastructure to cloud on Azure based on facts and deep insights.

MANAGE YOUR RESOURCES IN AZURE

Mugato inventory, monitor and help manage servers on-premise, in public and private cloud, and in hybrid environments.

OPTIMIZE YOUR CLOUD SPENDING

Mugato helps you understand the cost of cloud usage, including the specific pricing details on Azure – enabling Azure pricing on application and servers based on historical utilization.

JAMMERBUGT MUNICIPALITY INCREASE THEIR EFFECTIVENESS WITH MUGATO

"The big win with this software is that we gain transparency in our IT-infrastructure. Because the analysis runs automatically, we now have an online overview we didn't have before."

EFFECTIVE IT OPERATIONS

With Mugato, Jammerbugt Municipality got an extensive insight into the IT-infrastructure. The service has given the organization thorough knowledge of its own IT-infrastructure and created a fact-based foundation for future digital projects.

IMPROVED RESOURCES USAGE

"We are a relatively small department, and we don't necessarily have the specialist knowledge it takes to have a natural overview. Now we have gained both insight and overview gathered in one place with this tool, which we couldn't get in any other way"

EFFECTIVE PARTNER ENGAGEMENT

"We can share the service online with our partners, so we have a common data analysis platform to collaborate on when we need to qualify and prioritize new IT-projects, manage progress in the IT-infrastructure, and ensure a data-informed outset for leadership decisions"

Quotes: Morten Hedegaard, Head of IT, Digitalization & Procurement, Jammerbugt Municipality
