Identity Governance for the Agile Business

TheAccessHub Enterprise
Autonomous Identity Governance™

KEY STATISTICS

42% of colleagues have access to company systems and data post termination

7 in 10 colleagues have access to company data that they should not

Less than 1/5th of company systems are included as part of their Identity Governance Program

INDUSTRY QUOTES

“I estimate that at least 50% of Identity Governance programs are in distress”

Leading Industry Security Analyst

“Traditional Identity Governance programs have been like cooking bacon in a frying pan... Only in the nude.”

*President & CEO
Leading Data Governance Vendor*

THE GROWING COMPLIANCE CRISIS

The demands of providing secure access to enterprise applications with fewer resources has never been greater, especially as applications and identities move to the cloud. The evolution of cloud based applications continues to expand and is no longer a question of “if” or even “when” but has become one of “how fast” and “how can we be ready”? Forbes reports that 87% of organizations are currently using cloud-based infrastructure, and **Gartner states that the bulk of IT spending has already shifted to cloud-based computing.** At the same time, organizations are still at a point where many identities and applications will remain on-premise for the foreseeable future.

This “**hybrid**” model presents a unique security challenge as organizations must secure both **on-premise and cloud-based** systems with a cohesive Identity Governance solution. **TheAccessHub Enterprise was designed to handle this hybrid model,** allowing you to manage Identities across your entire enterprise, regardless if the Identities are in the cloud, in your datacenter, or any hybrid combination. When done correctly, a comprehensive Identity & Access Management / Governance (IAM/IAG) solution will deliver multiple benefits including reduced costs, improved business agility, enhanced productivity, and significantly improved regulatory compliance. This is accomplished through enforcement of access policies and visibility to “Who Has Access to What”.

“What we tried to accomplish in 5 months with a competing governance product, we were able to accomplish with TheAccessHub in 1 day”

*Senior Director,
Government Agency*

THEACCESSHUB ENTERPRISE EDITION

TheAccessHub is an award winning Identity-as-a-Service governance platform that manages identities, entitlements, compliance & certification with strong analytics and reporting – all running on Microsoft Azure. Most Identity Governance platforms available today are on-premise, utilizing monolithic technology architectures with poorly integrated bolt-on components. As a result, these old platforms require huge amounts of time, money and effort to customize, implement, and maintain. Conversely, **TheAccessHub is purpose built in the cloud** utilizing a modern, **API-based micro-services architecture.** In addition, TheAccessHub’s **Artificial Intelligence risk engine** represents an intelligent shift in Identity Governance providing Access Advisory and Peer Access Analytics and **virtually eliminates the operational challenges** associated with previous generation Role Discovery, Engineering, and Management solutions.

THEACCESSHUB & MICROSOFT AZURE

With its **cloud-first, mobile-first** design, TheAccessHub Enterprise Edition can be accessed from **any device** – essential for today’s mobile workforce. Seamlessly connecting to your Microsoft Azure, Office 365, and Azure B2C environments, TheAccessHub also connects to many other **cloud & datacenter apps** including Salesforce, GoogleApps, ServiceNow, Box, SAP, On-premise Active Directory etc. TheAccessHub Enterprise features:

Access Management

TheAccessHub leverages the enterprise grade authentication services provided by Microsoft Azure – SSO / Federation, Identity Protection and Audit.

Access Request Management & Provisioning

Streamlined and integrated colleague onboarding/offboarding with drag & drop workflow. Automated provisioning, and de-provisioning

Identity Analytics & Reporting

Clear visibility of who has access to what. Real-time AI-based risk analytics and risk posture at the enterprise, application and colleague level

Access Certification & Governance

Strong enforcement of SoD policies to ensure colleagues always have business approved access. Modern user interface and intelligent certification for non-technical colleagues

Identity Implementation & Operations

Quick time to value requiring little to no customization. TheAccessHub is a plug and play business solution for Identity Governance. TheAccessHub adapts at the speed of your business

IS THEACCESSHUB RIGHT FOR MY ORGANIZATION?

Common Challenge

Our Identity Governance platform requires significant customization

Our colleagues are frustrated with our current access review process

We don’t have clear visibility to what our Identity risk exposure is

We are moving to the cloud to lower costs and improve business agility

Upgrading our Identity Governance platform is cost prohibitive

Identity Governance has been far too costly for our organization

TheAccessHub Benefit

- ★ TheAccessHub uses configuration wizards and drag & drop for many routine tasks rather than developing custom code
- ★ TheAccessHub’s peer group analytics and user risk dashboard simplifies access reviews by providing access guidance & insights
- ★ TheAccessHub’s Application On-boarding is streamlined and simple, allowing you to connect all of your systems/applications providing broader visibility to “Who has Access to What?”
- ★ TheAccessHub is a subscription based Identity Governance solution that runs on Microsoft Azure. No infrastructure required
- ★ TheAccessHub’s business solution design lowers TCO and future upgrades are done automatically. TheAccessHub can be working within hours
- ★ TheAccessHub is a subscription-based Identity Governance solution that is Enterprise grade at an SMB price
