State Government & Health Plans

Our Healthcare Solutions Principles

- Single version of the truth
- Single quality measures platform
- Integrated analytics (Quality vs Cost)
- Reports designed with the action in mind
- BYOA™– Build Your Own Analytics (self-service)
- Simplicity / User Experience
- Integration capable (extensibility)
- Scalability

OneX enables the States to provide connected care and meet the Triple Aim Initiative:

Improve patient experience and quality
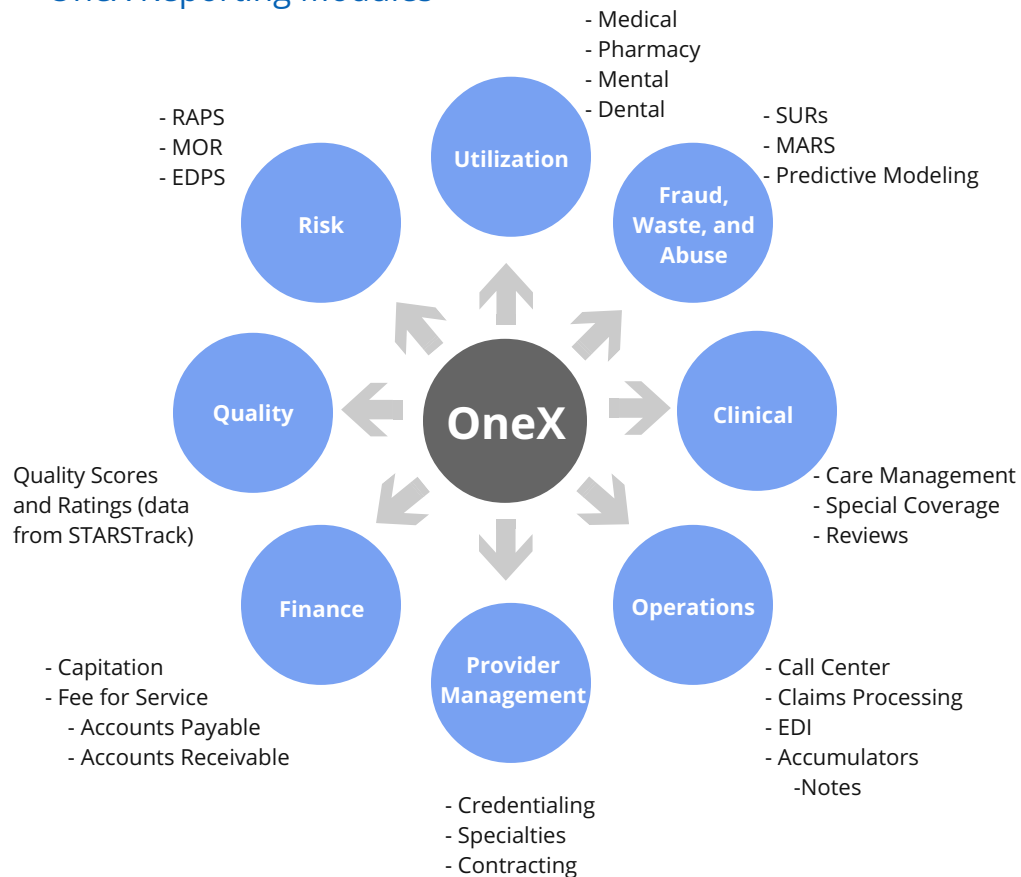

Reduce Costs
Improve health for the population

Experience ONE Version of the Truth.

OneX is an enterprise healthcare Data Warehouse built to integrate and unify health plans and government institutions data assets into a single, integrated, and cleaned data repository. It was built specifically for analytics and reporting needs of any segment including:

- Medicare (CMS's Five Stars Rating Program)
- Medicaid (CMS's 2390-F)
- Exchanges
- Commercial (QRS for QHP's)

OneX Reporting Modules

Utilization
- Medical
- Pharmacy
- Mental
- Dental

Risk
- RAPS
- MOR
- EDPS

Fraud, Waste, and Abuse
- SURs
- MARS
- Predictive Modeling

Clinical
- Care Management
- Special Coverage
- Reviews

Operations
- Call Center
- Claims Processing
- EDI
- Accumulators
  - Notes

Provider Management
- Credentialing
- Specialties
- Contracting

Finance
- Capitation
- Fee for Service
  - Accounts Payable
  - Accounts Receivable

Quality
Quality Scores and Ratings (data from STARSTrack)

OneX

OneX by nagnoi

OneX solves three main problems:

1. Data Integration Challenge:

- Eliminates fragmentation of the data, heterogeneous formats. Single version of the truth.

2. Lack of effective reporting and analysis:

- Critical subject areas, all in ONE integrated model, which allows for cross-subject analysis. Technology and analyses bundled.

3. Staying relevant to the current needs and regulations:

- Maintain its relevance by creating value through the evolution of Triple-Aim.

Key Functionalities to Experiment a Single Version of the Truth

Integrates data from any source (structured or unstructured data)	It has more than 10 domains including: Member, Provider, Claims, Authorizations, Utilization Management, Medical Management, Payment to Providers, among others.	It comes with data integration configurations for major claim systems

OneX Differentiators

- Supports decision making process for the State by taking data from all your relevant sources
- Same platform can be leveraged to manage all the on-going programs for the State (Medicaid/private option, commercial exchanges, Medicare, etc.)
    - PCMH performance monitoring
    - Identification of care gaps
    - Establish patient-centered workflow
- Disseminate key data through the various stakeholder groups and maximize existing systems and applications
- Pharmacy/Mental/Dental/Medical utilization monitoring
- Grow with the needs of the State as its healthcare programs continue to evolve
