

Navisite Managed DevOps Service

Speed up deployment and modernize your workloads with an experienced, cloud-savvy partner.

Wouldn't you rather focus on innovation for your business instead of reacting to continuous issues before, during and after each of your application deployments? With Navisite's Managed DevOps Service, we provide the expertise to help you do just that. Our team of engineers can help modernize your applications and optimize your deployment process, so you can get new features and functionality out faster, hassle-free.

KEY BENEFITS

- **Modernized applications** through continuous improvement of your cloud infrastructure, plus powerful monitoring and analysis tools to pinpoint and resolve performance bottlenecks through proactive reviews and health checks.
- **Faster application delivery** through optimization of your cloud infrastructure, automation of repetitive tasks, and building your CI/CD pipelines from start to finish.
- **Improved technical operations** by building cloud infrastructure that is secure, resilient, and scalable, including refactoring of legacy workloads and deployment of cloud-native services.
- **Shifted focus to innovative projects** by offloading DevOps work to our dedicated team of cloud-savvy engineers who understand your business.
- **Customized DevOps work** to meet your needs through our flexible, scalable pricing options including volume discounts.

**Continuous
Modernization**

**Accelerated
Deployment**

Focus on Innovation

SERVICES INCLUDE

CONTINUOUS MODERNIZATION

- Move legacy workloads to new flexible and scalable architecture
- Shift workloads from on-premises into the cloud to reduce total cost of ownership
- Improve availability and reliability of your workloads
- Move away from costly software vendor licenses

OPERATIONAL EXCELLENCE

- Get complimentary CloudFormation and Terraform templates to build your best-practice infrastructure
- Take advantage of 500+ automated best practice checks for your cloud account to identify areas of improvement
- Implement detailed, powerful business metric monitoring
- Optimize logging with implementation of centralized query and log data analysis using machine learning to identify patterns and anomalies

CLOUD OPTIMIZATION

- Review of your environment to assess where you can increase performance and availability of your workloads
- Reduce costs of your environment by optimizing your infrastructure
- Use DevOps best practices to deploy changes faster

SECURITY & COMPLIANCE

- Tighten security with alerts to track changes to cloud users and permissions
- Stay compliant with auditing tools to help meet evolving requirements (NIST, PCI, HIPAA, etc.)

DEDICATED TEAM

- Work with a team of DevOps experts who understand your business, led by a dedicated Technical Account Manager
- Keep projects and goals on track through our biweekly meetings with your internal or third-party developers and infrastructure engineers
