

Warehouse

Develop by NaviWorld Thailand

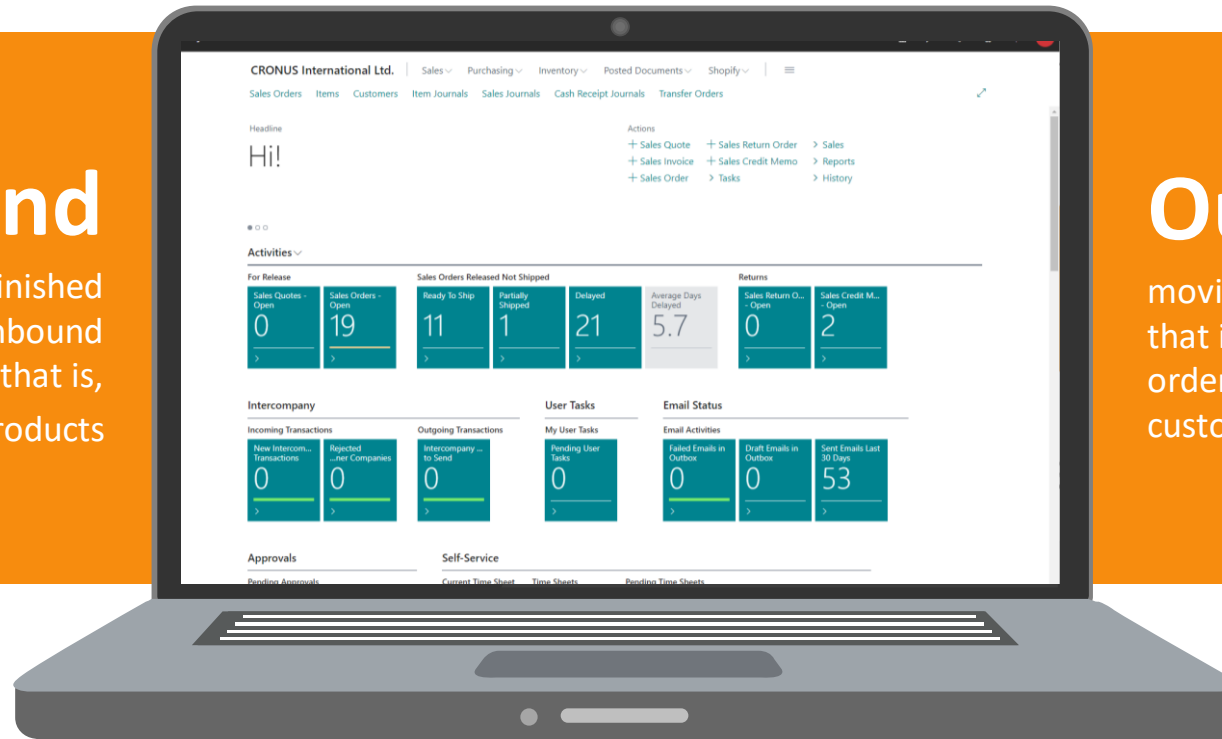

<https://www.naviworld-asia.com>

Warehouse

Inbound

moving raw materials, supplies, or finished goods into a supply chain. Through inbound logistics, a business secures its supply - that is, it obtains the products

Outbound

moving finished inventory out of a supply chain - that is, moving inventory out of storage, fulfilling orders, and delivering those orders to end customers.

Support multiple devices and OS

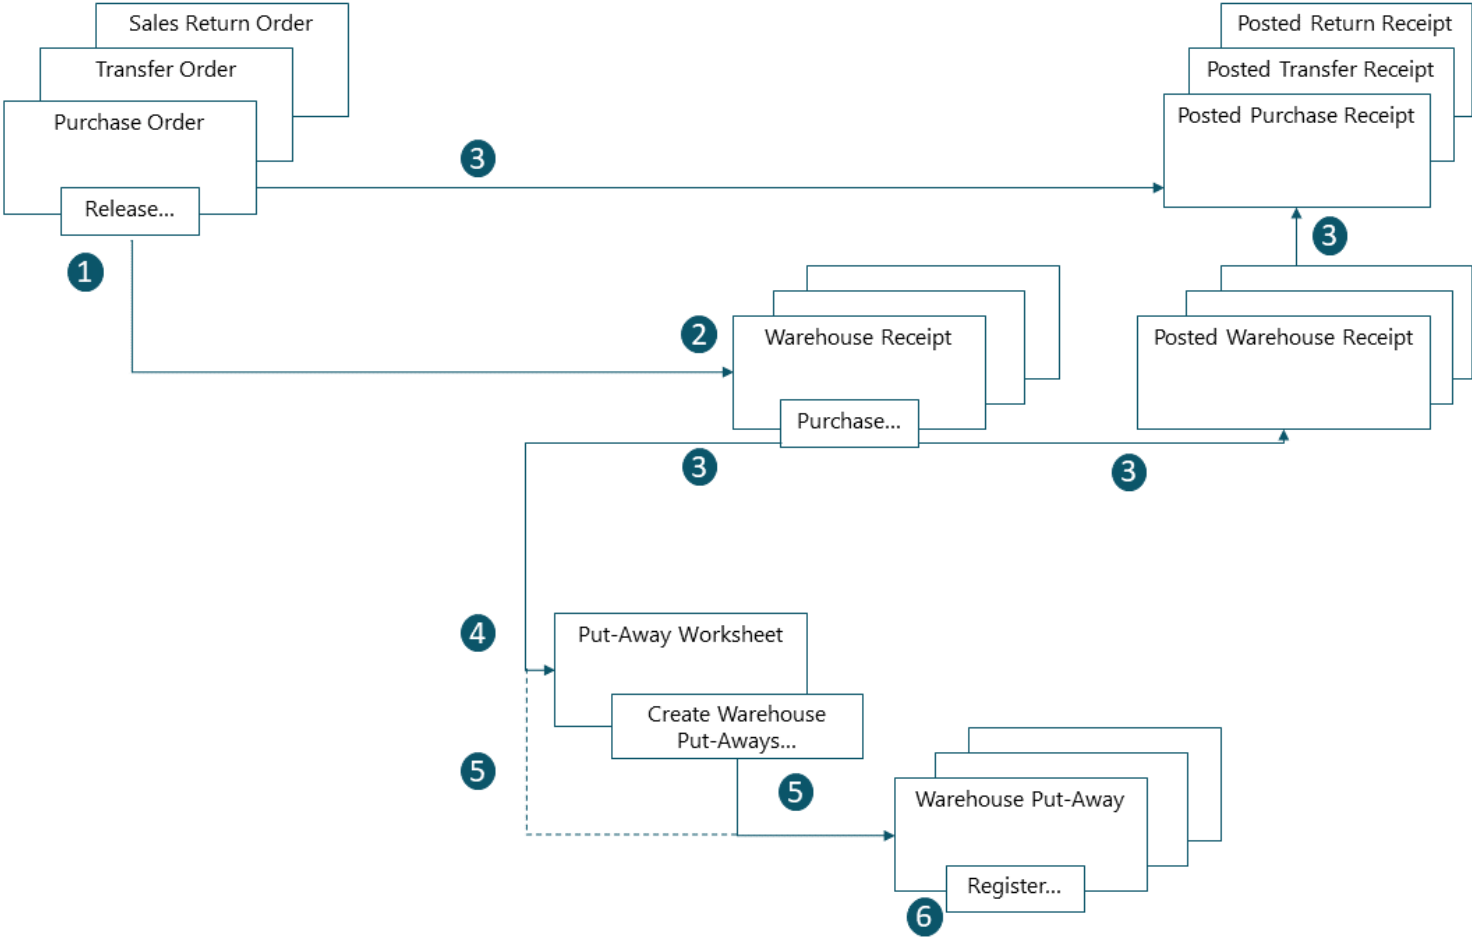

Multi-device refers to the use of different devices by the consumer when visiting a website or mobile application. For example, a multi-device visit to a website can start on a desktop, continue on a mobile phone and end on a tablet.

Online ERP System

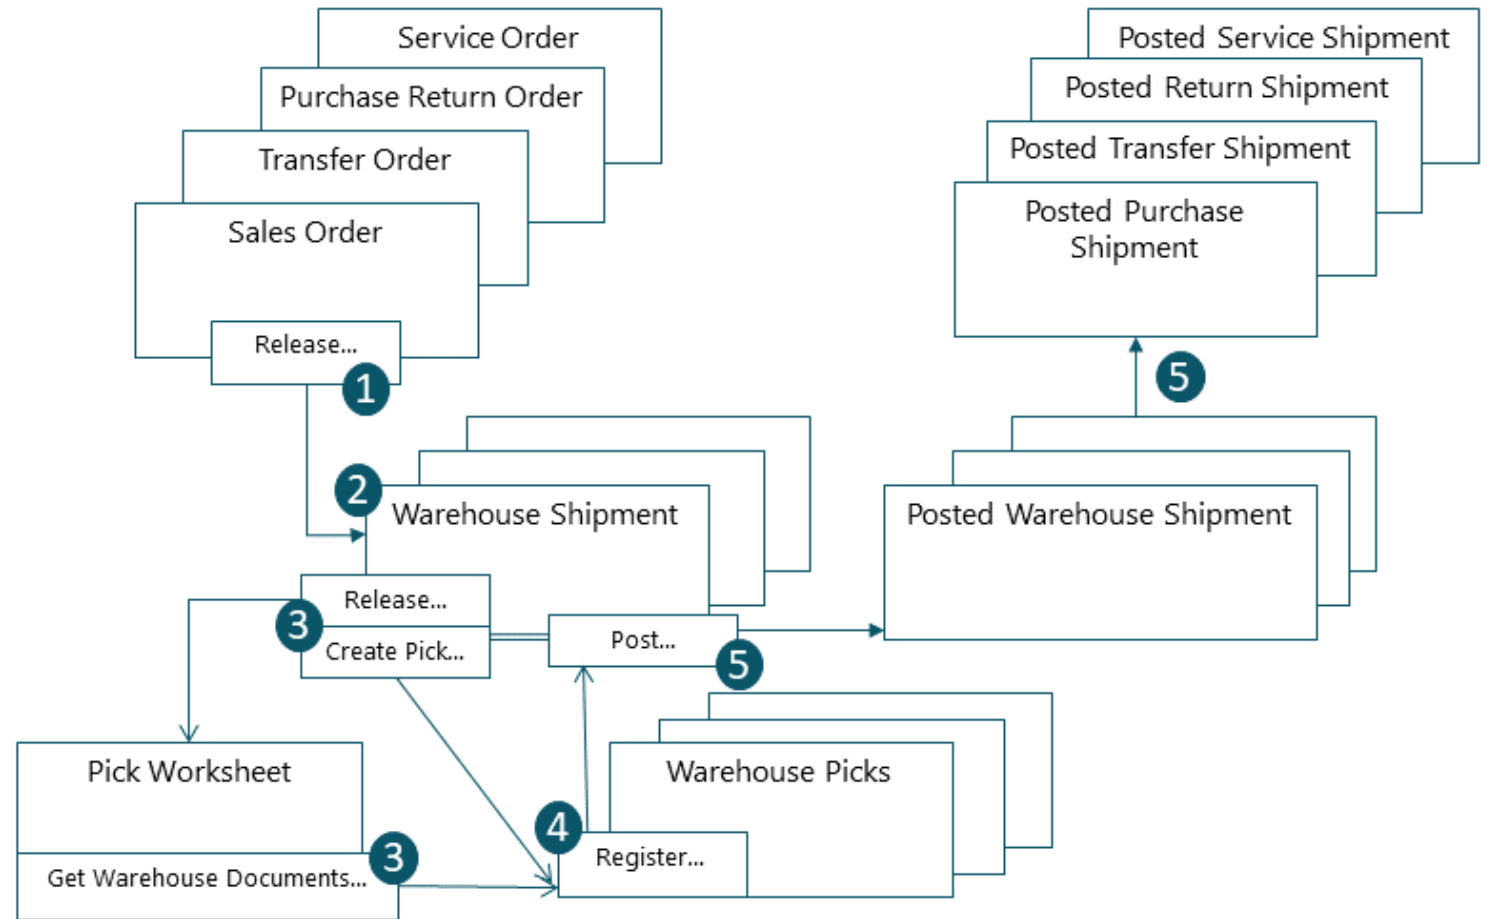

Real-time

A data-processing system in which a computer receives constantly changing data, processes it sufficiently rapidly to be able to control the source of the data

Inbound Warehouse Processes

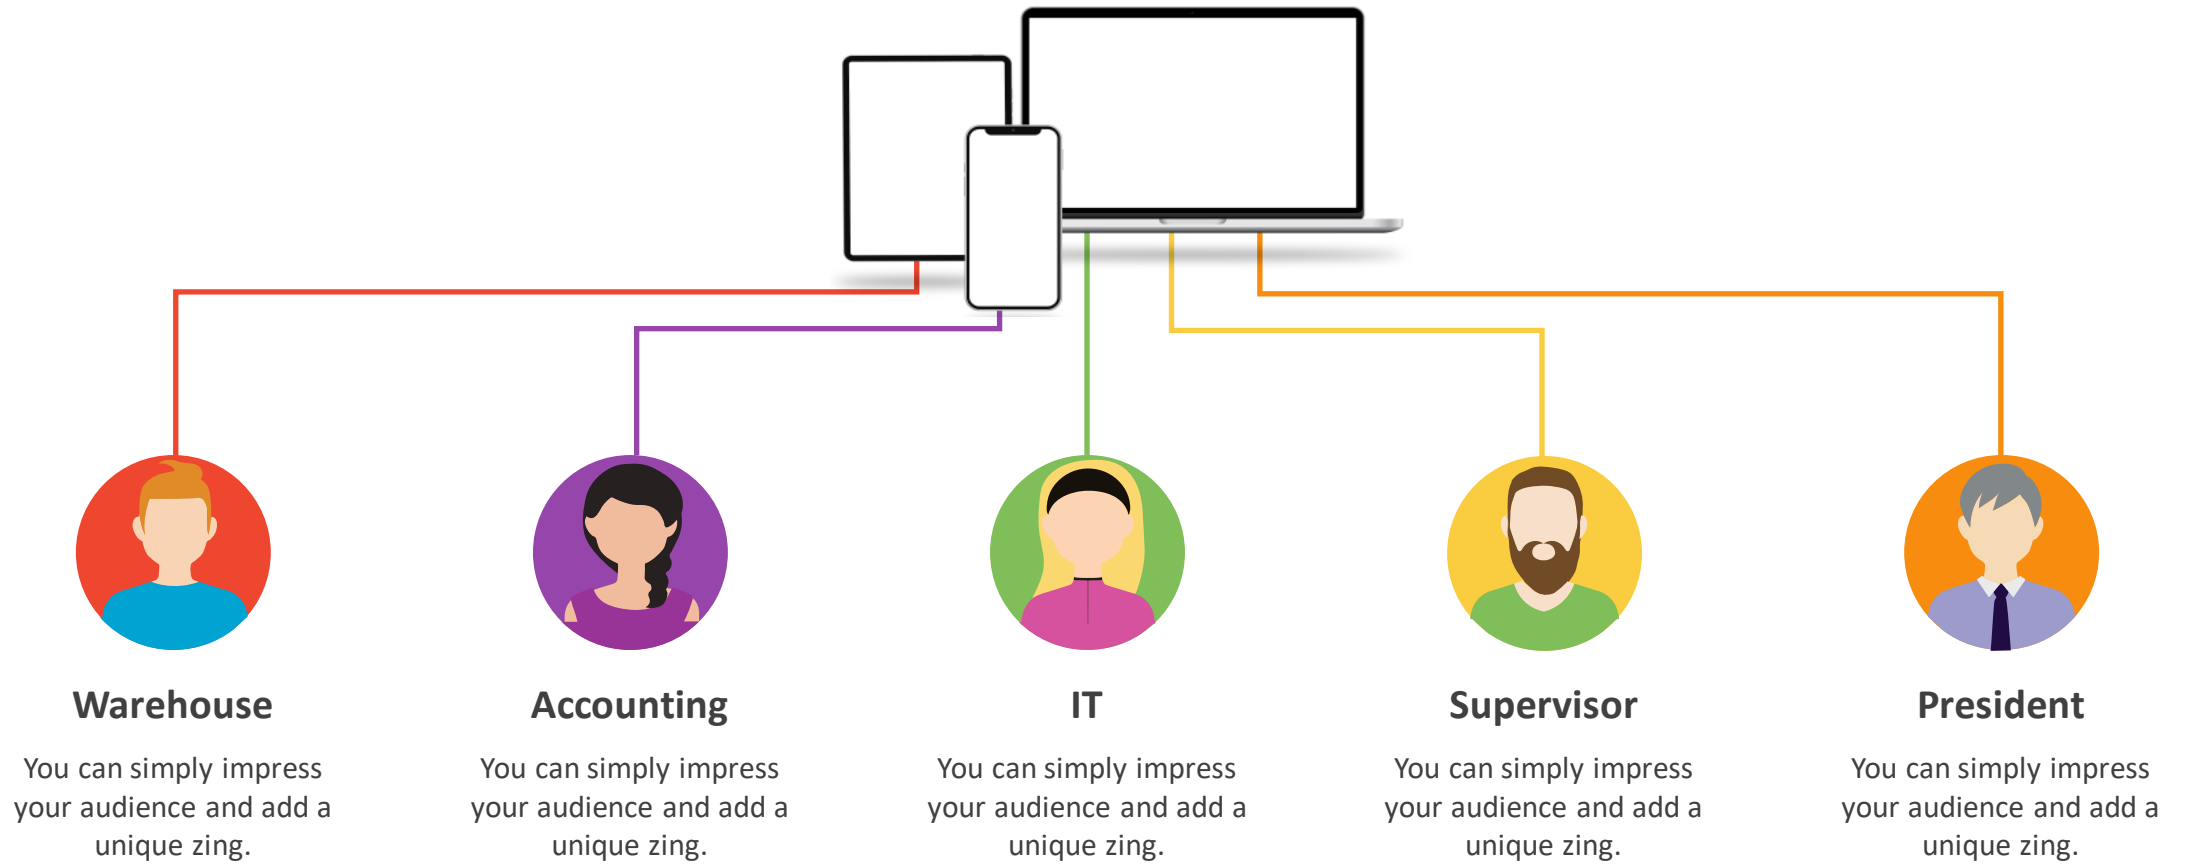

Outbound Warehouse Processes

Warehouse

Support multiple devices

Can be used anywhere, anytime, just connect to the internet.

Manual vs Barcode

Process time

Faster

Reduced the time to fill out data by 45 seconds per item. or increase efficiency by up to 75 percent

Data accuracy

More accurate

100 percent data accuracy, no need to worry about recording the wrong data.
