

Transformation accelerated

Strategic Infrastructure for the Future of Finance

The Challenge for Financial Institutions

Slow, Difficult & Expensive

To run effective PoC's and evaluate third party tech

1

Discovery - Who to consider?

How to identify the potential suppliers from the thousands available.

2

Onboarding

Procurement and security processes apply to all potential suppliers coming into the technology estate. They are inevitably complex.

3

Evaluation using data

Spinning up a developer test environment can be problematic. Datasets on which to test are often restricted or subject to Data office approval.

NayaOne Solution

One Connection to NayaOne enables rapid Discovery and Validation of any Fintech supplier

Discovery

200+ Fintechs ready to test

Validation

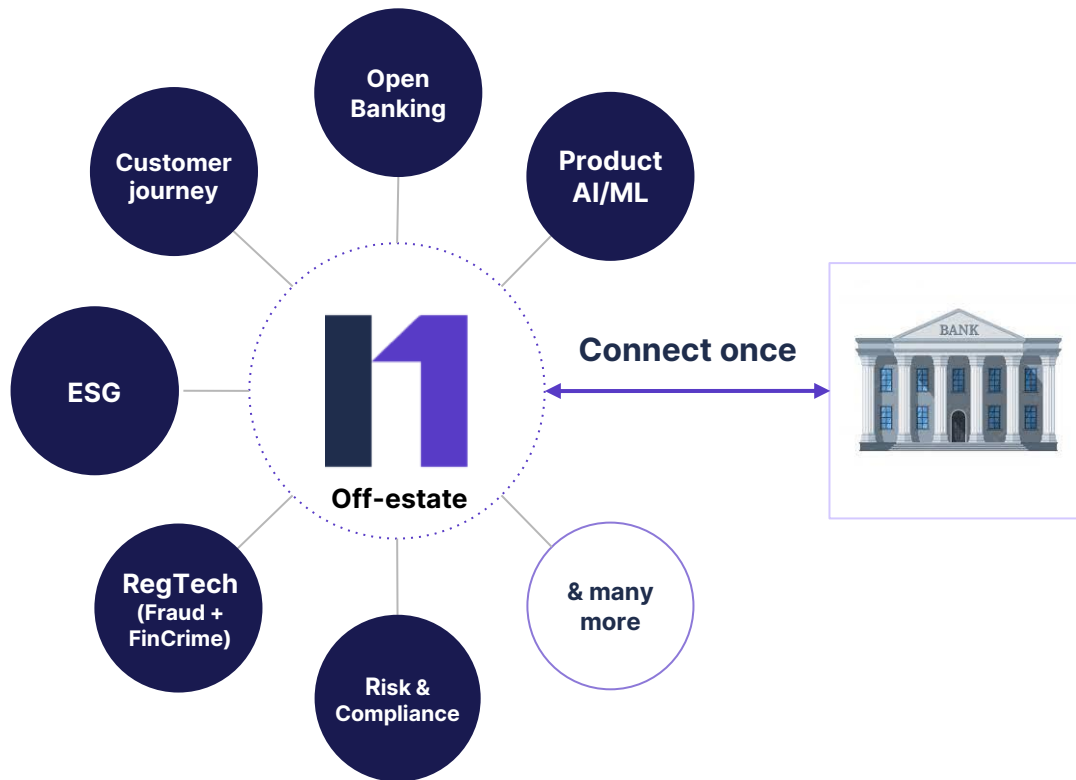

Test technology before onboarding

Data

100+ datasets to support validation

Developer Environments

Sandboxes to test all technology types

How to use the platform?

◆ **Rapid Experimentation with Fintechs**

Invite Fintechs to the off-estate platform and test a range of suppliers against a common dataset and common KPI's

◆ **Collaboration**

Securely host data and enable collaboration with partners, or any third party, where you're creating products & services

◆ **Lab / Fund**

Technical due diligence on potential investments. Incubation space with access to datasets, mentoring, dev environments and a showcase space for clients

◆ **Hackathons and Industry engagement**

Host Hackathons or an open innovation sprint around themes you care about. Use these to identify Lab participants

◆ **Innovation governance**

Single pane of glass view of all projects & collaboration taking place in the platform. Analytics, defined process and simplification

◆ **Ecosystem Development**

Build, grow and manage your Fintech & Partner ecosystem in the platform

Value for Institutions

Save Time

Increase Speed of discovery, testing and execution. 90% faster PoC delivery

Save Money

Onboarding, legal, IT & data resource requirements dramatically reduced. 80% saving vs as-is

Mitigate Risk

Robust technical evaluation lowers implementation risk

Engage Ecosystem

One connection gives you access to the community and invite others as required

Raise Quality

Higher frequency testing improves the quality of solutions taken forward for funding

Simplify

Single view of all transformation projects; inc. Hackathons, PoC's/ PoV's and a path to production
