# kai co-create - A Video AI Automation Tool

Provides no-code, streamlined workflow from project creation, data annotation, model training to deployment for faster, more accurate and traceable Video AI implementation

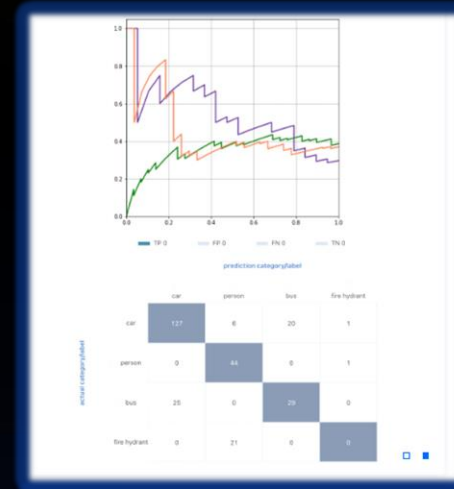

Project creation with one click

Supports quick project creation with templates and duplication of existing project formats. Keep the team progressing with rich features to onboard and manage projects, collaborators, data, and models all in one place.

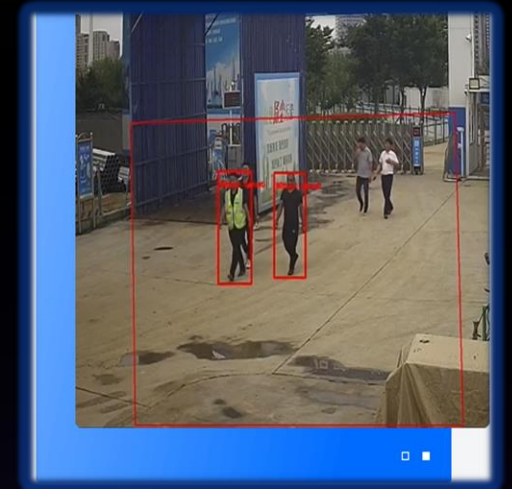

10 x faster with KAI Co-Create data annotation

Automated the labelling process to cut time by up to 54%! built-in rich annotation features to address variety of use cases. Data Annotation helps teams to stay connected. Use the share model to invite collaborators into a file, add comments and tag collaborators to notify them.

Quick tuning to improve model training performance

Model training supports customizations and comparison of various training models with varying parameters to analyse model errors, fix labelling, track metrics and more with real time reporting.

Transforming vision into insight: seamless Video AI model deployment for smart solutions

Automate your Video AI model deployment with KAI Video AI in a box. Experience unparalleled performance with the seamless integration of auto-scaling and comprehensive monitoring capabilities.
