

# Content Archive

**SAP® Premium Certified**  
Integration with SAP Applications

## Align the cost of retaining information with the value of the information to your business

Reduce storage costs by 50% by moving information out of the SAP database or legacy enterprise content management (ECM) systems into cost-effective archive storage with this lightweight solution

### Store Large Volumes of Information Cost-Effectively

Retain information required for reporting, audits or compliance cost-effectively with Content Archive. The ArchiveLink-certified repository solution creates a direct connection from the SAP archiving layer for the structured (ADK) and unstructured information to your chosen cloud-native object storage service. It helps retain large volumes of information securely and economically until it is needed by the business.

### Improve Access to Archived Information

Provide users with easy access to information, when and where it is needed. Save precious time and facilitate collaboration across the business with a solution that seamlessly points authorized users to information wherever it resides: the SAP database or an archive repository.

### Replace Complex Legacy Storage

Replace complex legacy ECM solutions and archive repositories with a modern and streamlined solution that is easy to set up, does not require additional hardware, and can be used across multiple enterprise systems.

### Connect to Leading Cloud Storage Providers

Take advantage of infinitely scalable and always-up-to-date cloud storage from leading cloud storage providers including Google Cloud, Amazon Web Services, and Microsoft Azure. Neev's Content Archive connects your SAP systems to your organization's chosen cloud storage to support an enterprise-wide information management strategy. This storage can also be provisioned and managed by Neev on Azure, or SAP BTP through SAP's object store services.

### Efficient Storage for:

- Inbound documents such as Orders, Invoices, etc,
- Outbound documents such as SAP billing output
- KPro-based content storage, e.g. SAP DMS, SAPOffice
- SAP printlists
- SAP data archive files (ADK)
- SAP DART files

### Key Capabilities:

- Pure software solution (100% SAP ABAP based)
- Delivered as single SAP transport (installed via STMS)
- Deployed directly on an SAP application server or on a virtual SAP NW application server for flexible usage (Multi system)
- Easy customizing in relation to SAP ArchiveLink settings
- SSL secured connection to cloud services
- Several optional features (encryption, caching)

## Our Benefits

### Lower IT Cost & Complexity:

Centralize storage of data and documents to reduce the complexity of your IT landscape and eliminate costly maintenance

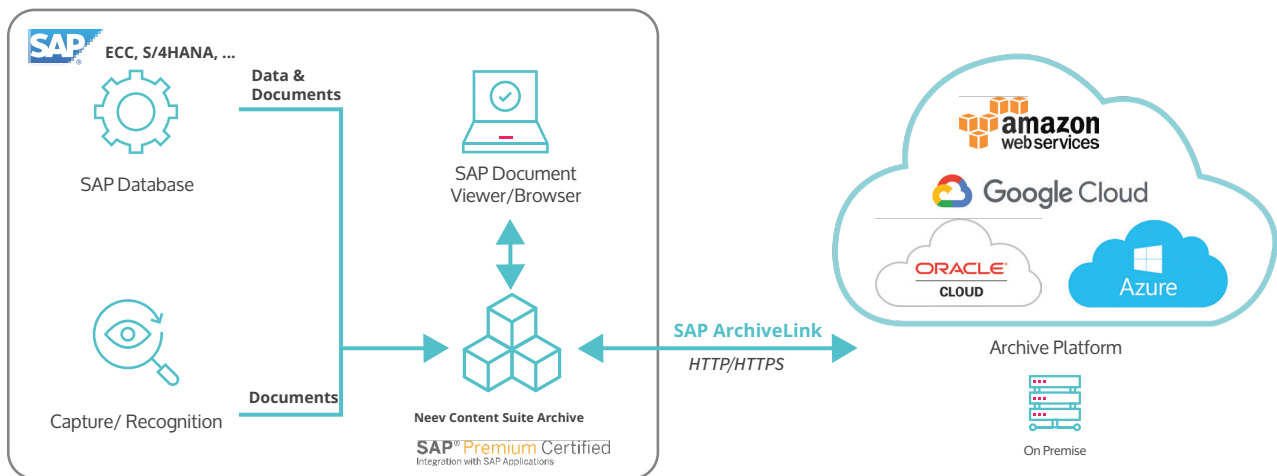

### Increased Efficiency:

Flexible storage options ensure users can access information when and where they need it without logging into separate ECM systems

### Improved Security & Compliance:

Move to modern storage solutions that meet the latest security and compliance standards

## About Neev Data and Document Solutions

Manage the entire lifecycle of information in your SAP systems using the complete suite of Data and Document Management solutions from Neev. Our solutions help organizations control how information is stored and accessed by the business, maintain consistent data volumes and stabilize escalating IT costs, and ensure information is kept in compliance with international data privacy and other legal, fiscal or industry regulations.
