Secure Gateways

Overview

WHAT IS SECURE GATEWAYS?

Secure Gateways is a Power BI application that gathers all Microsoft 365 and Azure endpoints (URLs, IPs, and ports) to configure, maintain, and optimize your cloud environment and applications for all cloud instances.

WHO IS IT FOR?

IT and cloud admins, Developers, and security teams

The problem

Standard endpoint configuration:

- ✗ Exposes your organization to significant security risks
- ✗ Leads to compliance violations

Existing retrieval methods:

- ✗ Allow limited access and view
- ✗ Aren't automated
- ✗ There are no change alerts
- ✗ Are segmented and not in a user-friendly format.

Our solution

Secure Gateways:

- > Saves you time and effort for finding and sharing the info you need
- > Doesn't require access to your tenant
- > Doesn't require installation or maintenance
- > Is always ready and up-to-date
- > Has advantageous pricing

Secure Gateways

Use Cases

- > Set up a new Microsoft cloud service in your environment
- > Fine-tune and maintain your Microsoft services based on specific requirements
- > Increase the performance of some Microsoft services based on your needs
- > Learn the requirements and pre-requisites for building apps and new services connected to your Microsoft cloud
- > Quickly find the best configuration for complex environments, such as hybrid and cross-cloud configurations
