Disruptive Tech Features

Concurrent
global containers

Using Serverless Technology, we are able to launch up to 1000 concurrent containers within 15 regions around the globe to simulate your tests capable of generating traffic of 10 M requests/minute.

CI/CD
Performance Testing

The platform is designed from the bottom up in regards to flexibility for user interaction, meaning that testing on a daily basis or after each release can be easily done through GitLab, Jenkins, GitHub or any other similar tool using our CLI

Scriptless
Load Creation

We have designed, developed and perfected our own way of generating load test cases which does not require any programming skills whatsoever.

Data Export

You are in full control of your Data and you can export it at any given time. Our in-depth documented APIs are extremely easy to use by any developer.
