

# Microsoft Defender for Endpoint Proof-of-Concept

Protecting the endpoint has never been more challenging due to the growing attack surface and increasing sophistication of attacks. With Microsoft Defender for Endpoint and Netrix, get the most comprehensive endpoint security solution for preventing, detecting, AI-based investigating, and responding to advanced threats across all your operating systems and network devices, including macOS, Linux, Android, and iOS.

## Accelerate your journey to unmatched endpoint safety

In this proof-of-concept, understand the capabilities of the solution, and how it can help you optimize the security posture and reduce attack surface - from industry leaders in Microsoft Security.

### What we cover in the PoC

**Duration: 2 Weeks** **Cost: \$15,000**

#### Plan and envision

- Review of your antivirus requirements and mapping to Windows security tooling.
- Environment discovery and design for the proof-of-concept.

#### Build

- Configuration of the solution: Endpoint detection and response, next generation protection, and attack surface reduction.
- Set-up of user access and rules.
- Configuration of SIEM integration and policies.

#### Prepare

- Deployment of Defender for Endpoint for proof-of-concept.
- Simulated attacks to help you understand the capabilities of the solution.
- Operational training for your security team.

#### Share

- Overview of the solution and socializing of results to the leadership.
- Design documentation with as-built and configuration information.

Netrix can take your Microsoft-powered infrastructure to the next level, providing you the engineering and services expertise to help you customize, automate, and analyze your entire environment.
