

Microsoft Teams Governance Workshop

Microsoft Teams has become the workplace operating system for many organizations. Today, more than 270M users connect, collaborate, and focus through Teams, whether they are in the office or working from home. However, too many Teams implementations are done without creating effective usage policies and standards.

This not only puts the corporation information and critical files at risk, posing a significant security and compliance challenge but also creates confusion among users, leading to a frustrating experience.

Effective governance is the path to adoption of technology but too many companies find it challenging to implement it.

Lay the groundwork for both compliance and adoption

Netrix is a leading Microsoft Teams partner with deep governance expertise. Comprising a mix of strategy and deployment, this workshop will help you understand Teams governance capabilities and implement the right controls for a defined use case.

What's covered

 **Duration: 1 Weeks**  **Cost: \$10,000**

 Discover	 Define	 Implement	 Share
<ul style="list-style-type: none">• Overview of Microsoft Teams and its governance capabilities, including best practices.• Strategy workshop with business users to identify the requirements for Teams governance.• Documentation of use cases for Teams Governance.	<ul style="list-style-type: none">• Governance strategy for a defined use case for the workshop.• Documentation of policies required to be implemented for the use case.	<ul style="list-style-type: none">• Implementation of policies including naming convention, storage, life cycle, security, classification, app restrictions, use of private channels.	<ul style="list-style-type: none">• Review of documentation with your team.• Recommendations to establish governance for other use cases.
