

# Managed Extended Detection and Response (XDR) Workshop

Powered by Microsoft

Microsoft's XDR solutions provide integrated threat protection across your entire enterprise

It has become critical for security solutions to be intelligent to detect known, as well as anticipate unknown threats.

Microsoft's XDR solutions provide a single, unified interface to collect, detect, and respond to threats across a wide variety of security solutions, including an organization's endpoints, servers, cloud applications, emails, and more. This allows for a faster and more comprehensive detection of threats, more contextual understanding, and AI-based response and mitigation.

## Get started with integrated threat protection with Netrix

With the growing tooling complexity and severe shortage of security professionals, it can be a struggle for your on-site security team to keep up with the evolving challenges.

We have designed this workshop to help you understand the capabilities of Microsoft's XDR solutions and how as the first MXDR verified partner, we can relieve the pressure on your team for day-to-day security management.

### What will you receive

**Duration: 2 Weeks** **Cost: \$10,000**

- Documented security strategy, in alignment with your existing environment and security objectives.
- Overview and demo of Microsoft's end-to-end security story for protection of your devices, identities, apps, email, data, and cloud workloads.
- Demonstration of Netix's security capabilities with either real security threats or an attack orchestrated by a red team.
- Best practices guidance on how to manage a SOC and handle advanced threats.

Netrix is a state-of-the-art partner and can take your Microsoft-powered security to the next level
