

Okta to Azure Active Directory Single Sign-On Migration

Solution Overview

Consolidate your tools and reduce overall cost by migrating your Single Sign-On from Okta to Azure Active Directory (AD). With Conditional Access in Azure AD, you can secure your apps and data easily by enforcing your standard security policies and automatically applying the right access controls when needed. Netrix's migration engagement is made up of 4 phases:

1 ASSESSMENT

Netrix will assess and evaluate your current Okta configuration(s) prior to deploying Azure Active Directory.

2 PLANNING

Our team of Microsoft experts will leverage the knowledge collected in your Okta assessment to develop a tailor-fit plan for your migration.

3 PROOF OF CONCEPT

During a 2-4 week pilot period, we will demonstrate the value of Azure Active Directory and validate the successful migration from your Okta platform.

4 DEPLOYMENT

Finally, Netrix will work with your team to fully deploy Azure Active Directory as your organization's single sign-on solution.

ENGAGEMENT OUTCOMES

1. Detailed migration plan based on your current Okta configurations
2. Design of your Azure Active Directory for single sign-on
3. A complete migration of apps from Okta to Azure Active Directory

CLIENT REQUIREMENTS

1. Participation from key stakeholders including IT staff who are responsible for your identity and security
2. Consultation from key stakeholders within IT leadership and application owners
3. Apps currently deployed in the Okta platform
4. An Azure Active Directory (Office 365) presence

Why choose Netrix?

Since 2005, Netrix has provided engineering expertise, complementary solutions, and supporting services for the Microsoft technology stack. As a Microsoft Gold Partner, we have the expertise to deploy and support your team's new or existing Microsoft infrastructure.
