

Virtual Security Architect: Managed Service

The number of security tools an organization uses has increased by 19% from 64 to 76 in the past two years, according to Panaseer. Despite that, companies continue to be victimized by cyberattacks. The greatest irony of the security ecosystem is that the very tools designed to maintain security can present the greatest threat by adding cost, complexity, and monitoring fatigue.

Maximizing value out of security solutions requires someone who can bring together comprehensive security strategy, in-depth knowledge of the tooling and configuration best practices - someone who can help you strike an intelligent balance between people, process, and technology.

Bring certainty without complexity in your security

Many organizations don't require a full-time Security Architect. Netrix Global brings the best in Microsoft Security to deliver your leadership, vision, and technical aptitude towards designing and implementing a resilient security architecture, the way you want, without hiring a full-time resource.

What we offer

 **Duration: 1 Year**  **Cost: \$38,500**

Strategy and planning

- Workshop to understand your organization's security requirements and current tooling.

Assessment and roadmap

- Analysis of your existing set up through environment review, administrator interview and configuration audit.
- Security roadmap, in line with business objectives and ever evolving security threats.

Deployment oversight

- Championing of security deployment, along with set-up of policies, processes, and systems.
- Aligning architectural components with any necessary regulatory requirements or standards.

On-going advisory

- Quarterly review, interpretation, and reporting of Microsoft security architecture: Conditional Access insights, Device hardening, Data Loss Prevention, and Application Consent.

Netrix Global can take your Microsoft-powered infrastructure to the next level

From cloud through security, we provide industry-leading engineering and services expertise to help you customize, automate, and analyze your entire environment.

 **Advanced Specialization**
Identity and Access Management | Information Protection and Governance | Threat Protection | Adoption and Change Management

 **Solution Partner**
Security

 **Member of Microsoft Intelligent Security Association**

 **20/20 Microsoft Security Award Finalist**

Note: Pair Virtual Security Architect with other tangential security services, such as managed detection and response, vCISO, penetration testing, and threat assessments to realize even more value and efficiency.
