

Azure Done Right: Cloud Adoption Framework (CAF)

Accelerated cloud adoption with confidence using proven guidance designed to meet your business and technology strategies to succeed in the cloud

The Cloud Adoption Framework for Azure means changing how you do business—not just swapping out technology, but changing your enterprise, the culture behind it, and you too.

This offer includes all you need to define an Azure strategy and implementation plan to confidently deploy initial production workloads to Azure.

What is the Cloud Adoption Framework?

- Proven best practices for organizations to better align their business and technical strategies.
- Increases customer cloud readiness and unblocks cloud adoption.
- Create cloud-ready environments

Why use CAF?

- Define an organizational strategy for Azure.
- Understand the business value of potential Azure workloads.
- Rapidly bootstrap a complete Azure Landing Zone that is ready to host production workloads.
- Align Azure infrastructure and governance to organizational requirements.
- Implement critical governance controls covering security, availability, cost management etc.
- Identify appropriate initial workloads for Azure.

Align to business requirements

- Clearly identify your business goals and map those to a prioritized Microsoft Azure implementation roadmap
- Quantify business value
- Identify what Azure services will deliver the greatest impact

Build what contributes to your business strategy, not what is easy or cool

Fast, cost-effective implementation

- Create a scalable scaffolding to support long-term growth and use of Microsoft Azure
- Avoid time-wastage and re-work
- Implement what you need, when you need it

Avoid security spend eating your entire IT budget

Improved Compliance

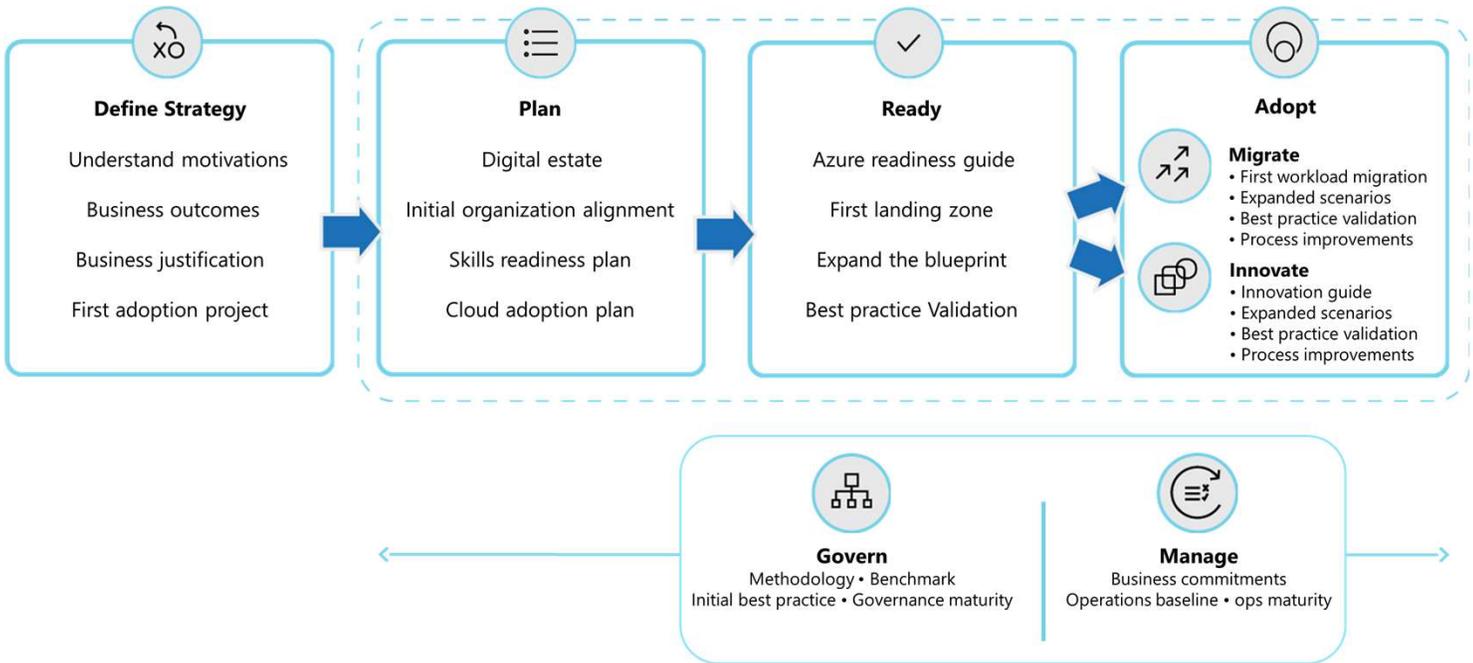

- Build in governance and security controls from day 1
- Clearly identify management and compliance requirements
- Provide visibility to stakeholders
- Keep costs under control

Prove to your stakeholders that you're on top of security and compliance

The solution: Cloud Adoption Framework

The Cloud Adoption Framework consists of many components that guide a successful implementation of Microsoft Azure through the entire lifecycle from initial envisioning until management of the built solution. <http://azure.com/cloudadoptionframework>

Netsurit has developed a comprehensive delivery model for structured implementation of the Cloud Adoption Framework. This consists of a set of predefined workshops, implementation activities and documentation
