

Neudesic Knowledge Governance Workshop

Gain insights into your M365 data.

Create a comprehensive **Data, Privacy, and Security** plan for Microsoft 365 Copilot and beyond.

2024 Infrastructure & App Innovation Award Winner
2024 Security Award Finalist

2023 US Artificial Intelligence Award Winner
2022 Global Modernizing Applications Award Winner

The Neudesic Knowledge Governance Workshop is a 4–6-week session that is designed to assist customers in safeguarding their sensitive information. This workshop involves reviewing data handling practices to prevent oversharing and enabling existing Microsoft Purview features to manage, monitor, and protect data, reduce compliance risks, and meet regulatory requirements.

Our multi-phased approach includes:

DATA AND GOVERNANCE REVIEW

Examine and evaluate the data leveraged by Copilot for Microsoft 365, spanning SharePoint, Teams, and OneDrive, to detect possible data oversharing by executing custom PowerShell scripts and analyzing SharePoint Advanced Management (SAM) reports.

Identify potential legal, compliance, and privacy risks stemming from users having unauthorized access to data beyond their permissions.

CREATE A DATA, PRIVACY, AND SECURITY PLAN

Develop a strategy to mitigate risks of oversharing and data exposure by showcasing the value of using tools such as SharePoint Advanced Management (SAM) and Microsoft Purview Information Protection and Data Loss Prevention.

Establish policies for data retention, sharing permissions, and the management of redundant, outdated, and trivial (“ROT”) content.
