

Azure Site Recovery Proof of Concept

Thinking about moving your workloads to the cloud and not quite sure how to get started?

Allow us to help! With our Azure Site Recovery POC offering, we will help you identify a workload and get you started with Azure Site Recovery or Azure Migrate to get that workload either backed up for resiliency purposes (Disaster Recovery) or for a full migration.

Identify Workload

First, we will work together to identify a workload you would like to migrate or backup to Azure

Choose a path

Depending on your needs, we will determine if the workload is to be migrated or backed up for resiliency

Prepare

We will replicate the workload servers to Azure and configure any additional required resources

Validate

We will bring the workload online in Azure for testing purposes and ensure you can run all your tests

Migrate

If migration is your path, after tests are completed we will finalize the migration of the workload.

This offer does not cover the costs charged directly by Microsoft for consumed Azure services and resources.

Neway will ensure all required infrastructural pieces are in place for the workload to run successfully, testing of workload functionality is under the responsibility of the customer based on success criteria defined prior to the migration.
