

Azure Site Recovery Proof of Concept

Thinking about moving your workloads to the cloud and not quite sure how to get started?

Allow us to help! With our Azure Site Recovery POC offering, we will help you identify a workload and get you started with Azure Site Recovery or Azure Migrate to get that workload either backed up for resiliency purposes (Disaster Recovery) or for a full migration.

This offer does not cover the costs charged directly by Microsoft for consumed Azure services and resources.

Neway will ensure all required infrastructural pieces are in place for the workload to run successfully, testing of workload functionality is under the responsibility of the customer based on success criteria defined prior to the migration.
