Cloud Collaboration

Modern Collaboration in a Single Application

Many organizations today are searching for the perfect collaboration suite that enables their workers to chat, share files, make calls, and hold conference calls, with security as a foundation.

Some are combining the services of Okta, Zoom, Box and Slack together in their quest to achieve this goal. Often, this results in a complicated administrative experience, workloads that don't interact seamlessly with one another, security and compliance complexity and higher costs to the organization.

How can Axis Business Solutions help your organization?

Axis Business Solutions is a recognized Microsoft Gold partner, and we are recognized experts in Microsoft 365. Our team has more than 100 combined years of experience in the collaboration field, and we can help YOUR organization find the right solution to fit your needs.

Our Microsoft Teams Planning Engagement

Our modern workplace architects specialize in the latest Microsoft collaboration and identity products and can help you make the right choices for your organization's needs. In the **Teams Planning Engagement**, we offer customers an overview of Microsoft's productivity toolsets with a focus on Microsoft Teams to demonstrate the native capabilities that these products can provide.

As part of this engagement, we will evaluate your organization and provide suggestions on how these powerful collaboration and identity tools can help ensure a productive, secure environment for your employees, no matter where they're working. The Teams Planning engagement includes the following:

Teams Planning engagement

- ✓ Review of your current collaboration tools
- ✓ Demonstration of Teams capabilities
- ✓ Licensing review to determine gaps
- ✓ Executive level Findings document
- ✓ Discussion of Findings document and next steps via remote session

In our customer's words...

"The staff at Axis Business Solutions always has our back when it comes to technical issues and support. They have become an amazing resource we depend on to be experts in areas of IT that we are not."
