Unified Meetings with Teams Meeting Rooms Accelerator

In this hybrid workplace model, we are all experiencing that: i.) People are joining meetings from anywhere and from any device; ii.) They are spending more times in meetings than ever before, and iii.) These meetings have become less structured and often impromptu. However, many of today's room systems are not designed to support these new requirements. They are best suited to people who are physically present and even when there are remote communication facilities, it takes minutes just to get started.

Microsoft Teams Rooms is enabling companies to turn their meeting rooms, of any shape and size, into an easy-to-use and inclusive meeting space.

Reduce the complexity of your meeting room transformation journey

As businesses dip their feet into the modernization process, they are realizing that interoperability of different solutions is critical, especially since they have existing investments in legacy conference rooms and personal video devices.

At New Era, we have a history of planning, designing, and implementing the most intricate multi-vendor systems, and providing unbeatable end-to-end support.

In this accelerator, we will showcase the key capabilities of Microsoft Teams Rooms and demonstrate how we can help you push through your legacy barriers and integrate any technology with Teams Rooms using our Interop service.

Our delivery process

Assess
- Evaluate your current meeting room environment to understand meeting room configurations and key dependencies and complexities

Envision and Plan
- Showcase the 'art-of-the-possible' with Teams Meeting Rooms and determine your future telephony state.
- Create a plan to integrate existing solutions with Teams Meeting Rooms.

Proof-of-concept
- Procure and implement a fully engineering solution for a small to medium room.

Share
- Socialize the engagement with the leadership and provide a deployment roadmap.

Duration: 5 Days   **Cost: $6,000**
