

Data Warehouse as a Service

Transformative Data Insights using DWaaS

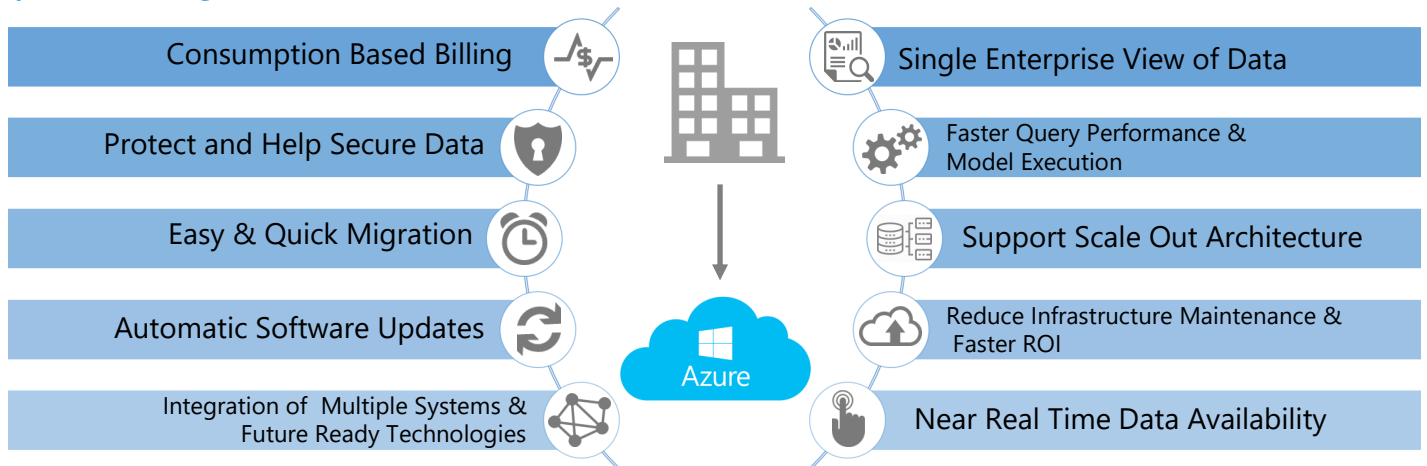

As organizations move to data driven value based service models, they face greater pressure to reduce costs. Migrating their infrastructure to the cloud offers them with an elastic, secure, robust and 24x7 available architecture on a consumption basis which eases cashflow and keeps pace with your growth.

Businesses are using Azure Data Warehouse to create new data warehouses in the cloud, extend their existing enterprise data warehouses to the cloud, and/or migrate on-premises data warehouse to Azure Data Warehouse.

Solution Description

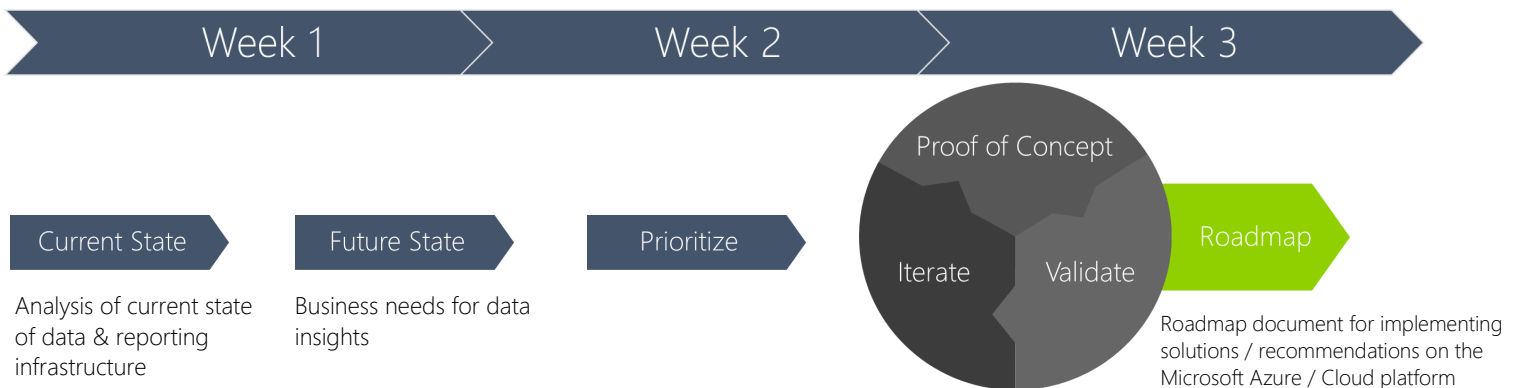

Azure also offers easy access to modern technologies including Cognitive, Natural Language Processing (NLP), Advanced Analytics that are available via API's and can be easily integrated into existing applications.

Key Advantages of DWaaS

Assessment Methodology

Nihilent helps you fully realize the value of data with Data Warehouse as a Service using Microsoft's Azure Data Platform to quickly run complex queries across petabytes of data.

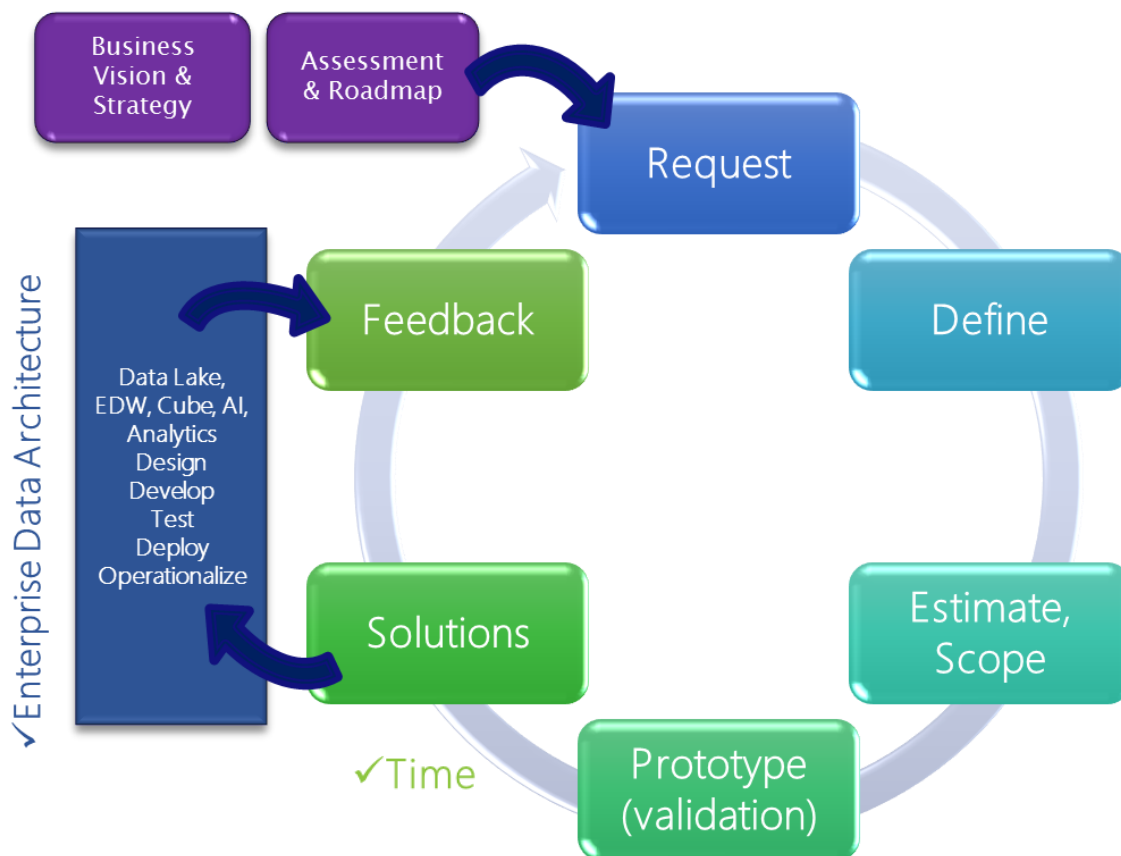

Nihilent's Proven Process

We believe it all starts in the data—we will partner with you to use data driven principles and process to remove those roadblocks—allowing you to transform your business. With new tools and information delivery channels in your hands, you can enable your business decision makers to respond quickly to changing demands.

Key benefits of Nihilent's proven delivery methodology:

1. Iterative delivery of reports and dashboards
2. Weeks instead of months using Microsoft BI tools
3. Explore data to align with reality
4. Evaluate requirements based on data reality
5. Evolve to build robust architecture
6. Repeatable process

Partner with Nihilent

Nihilent has helped leading companies across many industries implement future ready Enterprise Data Warehouses which can truly scale on-demand, handle exponential data growth across all types of data, protect access to your data and deliver predictive analytics for true business transformation.
