Need to plan your move to SharePoint?

NKUSI IT
SPECIALIZED SERVICES

Challenges

- Lack of insight into technical and functional configuration of your current CMS platform
- No detailed view of the data migration requirement
- No view of the business and technical resource requirements to move to Microsoft SharePoint

Without a proper view of the existing landscape there is undoubtable a large risk of not planning correctly for the move to Microsoft SharePoint. For a successful migration to Microsoft SharePoint, it is key to understand the current landscape, data migration needs, and resource requirements for the such a project.

Our Solution

An assessment conducted over a period of two days that consists of:
- Day 1 – conduct interviews with key customer experts onsite or remote
- Day 2 - prepare documentation / environmental report and platform or license readiness.

During this process we will obtain a detailed understanding of the current CMS platform and data migration requirements; Understand the resource requirements for the journey to Microsoft SharePoint; Produce a structured plan with experienced professionals for your journey.

Outcomes

At the conclusion of the engagement, you will receive the following:
- List of data marked for migration
- List and amount of required resources
- Project work plan
- Slide presentation of diagnostics results and project concepts
- Draft system implementation agreement
- Draft agreement for the support and development of the system

These outputs will equip you for a successful transition to Microsoft SharePoint

SharePoint Assessment

NKUSI IT
