

Power BI Solutions

Build intelligent reports, dashboards and templates tailored to your reporting and analytics needs - and get the most out of your data

Out-of-the-box reporting tools are typically limiting and inflexible in many common CRM, ERP or other business applications. NNIT can help you build Power BI Solutions that transform your data into manageable and intuitive dashboards accessible to all business decision-makers. A key feature is automating reports and processes, which demand no maintenance in the BI setup. With this foundation, your organization can focus on utilizing this effective communication platform to analyze and interpret your data.

Our approach is agile when developing your dashboards and reports. We do this to make sure we match your specific needs. By supplying ready-to-use dashboards, you will be up and running fast. You might have specific business requirements and end-users of the solution to tend to, which we will develop continuous in collaboration with you.

Benefits with NNIT Power BI Solution

Automation of processes and reporting

- Saves hours from manual reporting
- Ensures accuracy and repeatability

Gaining from data-in-place

- Combining data from multiple platforms, provides the cross insights
- Secure integrations gathers data

Intuitive templates

- Increased adoption by end-users
- Ensures data-driven decision-making

NNIT can help you extend your reporting with Power BI on top of and across other platforms:

SAP

Many of our customers are challenged to empower data self-service with data residing in SAP systems. NNIT can help you democratize your data through data integration with Power BI. Power BI is flexible and agile to build on top of SAP and results in shorter time to market.

Veeva

With an integration component, you are secured a validated integration when adding Power BI reporting to your Veeva solution. GxP data is securely visualized in Power BI and we know exactly how Veeva works.

Dynamics

With the same Microsoft origin, Dynamics and Power BI has a synergy that is undeniable. Power BI can be embedded in Dynamics, which gives the end-user a convenient platform easy to navigate.

Power Platform

The synergy between Power BI, PowerApps and the other components in the Power Platform brings additional layer of automation and report interaction with unparalleled ease of implementation. NNIT can help you build up customized solutions for your unique organizational needs.

We are not limited to these examples and offer multiple setups to other platforms

NNIT Power BI Solutions is scalable, which is why we offer Solutions to different extents based on one or multiple data sources. We deliver all sizes from POC to full implementation based on your needs:

Assessment of existing BI solutions and mapping of optimization potential

Building dashboards and reporting templates including automation principles

Modelling integrations components across applications for an absolute solution
