Power Platform Governance Framework
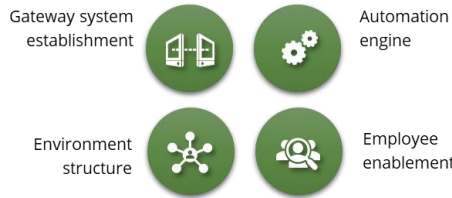

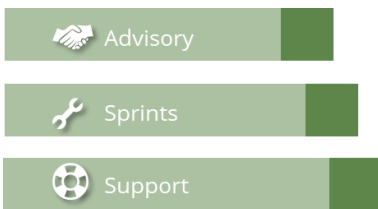

Enable Power Platform within your company's governance and polices

Is your power platform ruled by Anarchy?

If the answer is yes, this could result in fragmented or missing management. Furthermore, is your licensing handled sporadically and audit lacking? As a consequence, security, best practice and access management is decentralized. Do you know what the long-term consequences of your current approach?

Embrace the many new possibilities, while being in control.
NNIT has identified 7 tracks that needs to be addressed for an optimal Power Platform journey. Each of the tracks includes multiple activities

- Advisory
- Sprints
- Support

- Gateway system establishment
- Automation engine
- Environment structure
- Employee enablement

- Enable employees to do citizens development within the company's guidance and polices

- Easy activation of tools for IT to monitor and audit development and usage.

- Assurance of having the right approach and best practices of the Power Platform.

Smooth take off

- Get in control before it gets out of hand

- Make cost decisions on an informed basis

- Create your journey on proven concepts

Activate governance to ensure proper citizens development

Avoid security breaches

- Be proactive in your security compliance

- Ensure company data is safe with approved connectors only

- Know what apps are used and for what purpose

The governance help you protect your business-critical data

Automated Governance

- Monitor and automate clean up for non-relevant apps

- Only keep what matters

- Inspire innovation based on proven framework

Stay in control and focus while exploring new opportunities

"The Power Platform Governance Framework made it possible for us let our users explore the possibilities within the Power Platform and create business applications, without losing or comprising our company's policies and security."

- Danish pharma company, 40.000+ employees
