

# NNIT extends reporting with Power BI on top of and across other platforms

SAP

Many of our customers are challenged to empower data self-service with data residing in SAP systems. NNIT can help you democratize your data through data integration with Power BI. Power BI is flexible and agile to build on top of SAP and results in shorter time to market.

Life Science business applications

With an integration component, the customers are secured a validated integration when adding Power BI reporting to your life science solution. GxP data is securely visualized in Power BI, and we have great experience within life science processes applications.

Microsoft

Dynamics

With the same Microsoft origin, Dynamics and Power BI has a synergy that is undeniable. Power BI can be embedded in Dynamics, which gives the end-user a convenient platform easy to navigate.

Power Platform

The synergy between Power BI, PowerApps and the other components in the Power Platform brings additional layer of automation and report interaction with unapparelled ease of implementation. NNIT helps build up customized solutions for unique organizational needs.
