*An essential forensic tool
for security practitioners* ✓

 Microsoft 365

GTG Inspector

What is it?

GTG **Inspector** is a lightweight and highly-effective forensic tool used by security practitioners to quickly and effectively identify indicators of business email compromise

How does it work?

Under the hood: GTG **Inspector** validates emails end-to-end, delivering a non-repudiated solution for business email compromise that's built upon quantum-resistant email verification.

Ease of use

Installation of GTG **Inspector** is easy, and requires no endpoint touch. The security practitioner authenticates to the MS 365 tenant, and GTG **Inspector** is ready to go

Reliable and Easy to Use

GTG Inspector

Lightweight and highly-effective forensic software tool to quickly and effectively identify business email compromise

All You Need

GTG **Inspector's** reports are dynamic, and easy-to-understand. Graphs can be customized, and are easy to print or capture as PDF for collaboration purposes. Prior reports can be reloaded for review and further assessment.

Verified

When GTG says "verified," it means that GTG **Inspector** has compared the email hashes, and has used SHA256 to validate that they match, without a requirement to use PII

Case Study: Insuremart

CEO Jason Young was shocked to hear of an email-based campaign that cost his network a large quantity of money, so he contacted GTG.Online to gain clarity of his own risk surface.

Using GTG Inspector, GTG.Online created an Inspector Insights Report, which quickly helped Jason determine his risk, which related to third party integrations into business automation.

Once the issues had been resolved, Jason Young chose to license GTG Inspector to actively monitor his installation for ongoing or evolving threats.
