Application development in a nutshell.

We design & develop custom, cloud-native web applications

1.

Design

We do world-class application UX, UI and service design

2.

Develop

We're experts in serverless backends, APIs, integrations and smoothly-working frontends.

3.

Custom

Custom is our business.

We don't do COTS, web sites, content management systems, etc.

4.

Cloud-native

We choose to focus in cloud-native instead of on-prem because of sustainability, productivity and cost-effectiveness

5.

Web applications

There are many different kinds of applications (desktop, embedded, mobile, etc). We focus on web applications.

6.

For businesses

Our focus is typically in B2B instead of B2C.
