Virtual Desktop in the cloud - benefits.

Azure Virtual Desktop is a "Desktop-as-a-Service" (DaaS) solution, enabling secure and streamlined remote work on any device (for employees, consultants and 3rd parties).

Reduce pay-as-you-go consumption bills

No upfront CAPEX investments, ability to continuously reduce/optimise OPEX costs

Reduce costs with pooled, multi-session resources

Reducing the number of VMs and resources, whilst providing a consistent service to your users

Autoscale to handle peak demand - deploy & scale in minutes

Increase/decrease capacity based on actual demand (time of day, days per week or month)

Security and compliance - protecting apps and data

Built-in threat detection, reversed data connections, no data left on individual user devices

Simplified operations, optimised licensing handling

Simplified IT management that uses existing licences to reduce costs

High availability, scale as & when needed

Fully scalable platform, on which the cloud provider offers 99.9% SLA for AVD service URLs
