

Designed to adapt to your business and team.

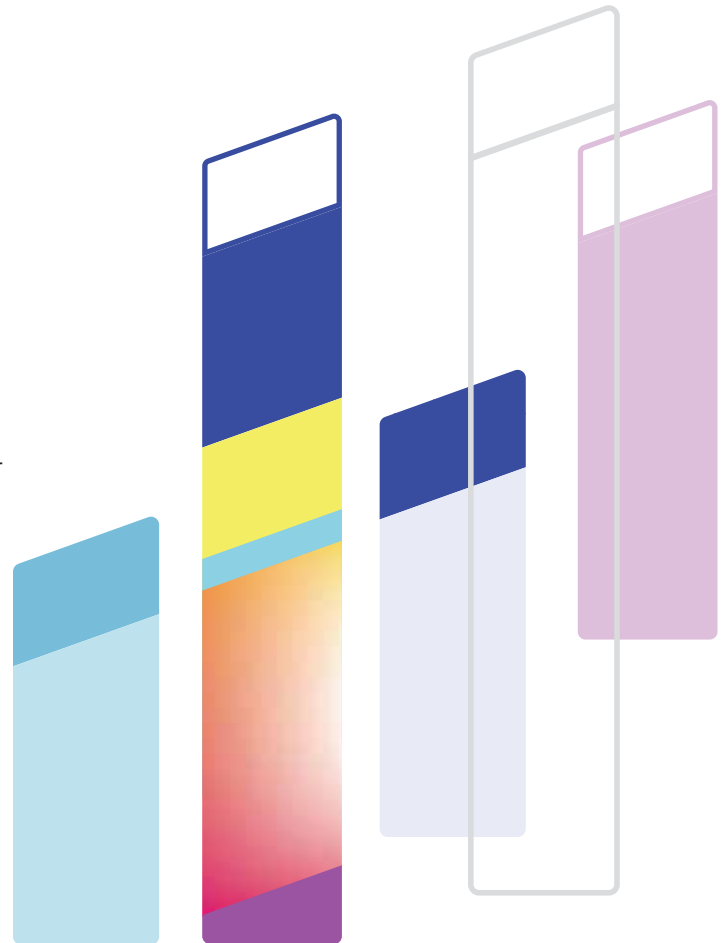

for IT teams + service providers

The Pillr platform

Pillr is a cybersecurity operations solution designed to adapt to the evolving demands of IT teams and service providers. Access the industry's most performant security technologies—supporting 450 integrations and counting—on an intuitive, web-based platform that's collaboratively managed by our expert 24/7/365 SOC team.

Our History

Pillr is a product of the Novacoast software development division—a team with over 20 years of experience engineering advanced cybersecurity solutions, in a company with a 26-year history in the industry.

The Pillr difference

One dashboard, total awareness

Analyze events spanning your security toolset and tenants—a single pane of glass as your source of security posture truth.

Complete end-to-end data inspection

Inspect any file and form of traffic, so you've got data clarity on 100% of formats and sources across endpoints and networks.

Always-on collaborative analysis + guidance

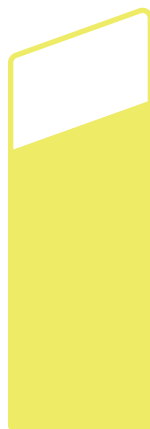

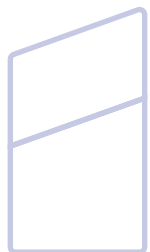

Our 24/7/365 SOC team is ready to support yours in real time, with the expertise to provide advisory on anomalous events and guide remediation.

Highly capable, easy to deploy

Go beyond conventional perimeter-focused security models with the Pillr agent—a lightweight, maintenance-free approach to endpoint monitoring.

Our 'any service, any tool' commitment

Helping you build a comprehensive security program with a promise to develop and support integration with 'any service, any tool' on Pillr.
