# Microsoft 365 Security 360°

## Secure by Design with Zero Trust

### Security Consulting Services

Secure by design based on Zero Trust with our **M365 Express Checks** and **Cybersecurity Advisory** engagements to accelerate Security & Compliance.

NTT provides services that cover the entire lifecycle of security to help your organization to **visualize and execute successful security programs**.

We examine and test your controls, policies and processes to identify cybersecurity vulnerabilities, and provide them an **action plan to improve your security posture**.

We assess your **security posture, identify gaps, and recommend improvements and a prioritized roadmap** to ensure your security architecture is 'secure by design' and aligned to your business needs.

### Technical and Support Services

Implement and support with our Technical and Support Services to **architect, source, implement and maintain Microsoft security controls**.

We **develop detailed designs**, and we **deploy and optimize Microsoft tools and Zero Trust controls** for your organization's particular cybersecurity needs.

Our technological focus in terms of **design and deployment** covers the following areas:

- Identity & Access Management
- Threat Protection
- Information Protection

### Managed Security Services

**Monitoring, managing, supporting and optimizing your security posture** to detect and respond to the latest threats.

**Detection of cyber-attacks** incorporating advanced analytics, comprehensive threat intelligence and validation by skilled security analysts.

**Security monitoring and log analytics** that extends visibility, supports compliance and regulatory requirements as well as reduces the overall risk and exposure.

Our service package is completed by **Managed Security Services** with the following services:

- Threat Detection
- Managed Detection and Response
- Enterprise Security Monitoring
- Vulnerability Management

NTT has the capabilities to manage Microsoft solutions 24/7 as MSS in our six global SOCs.

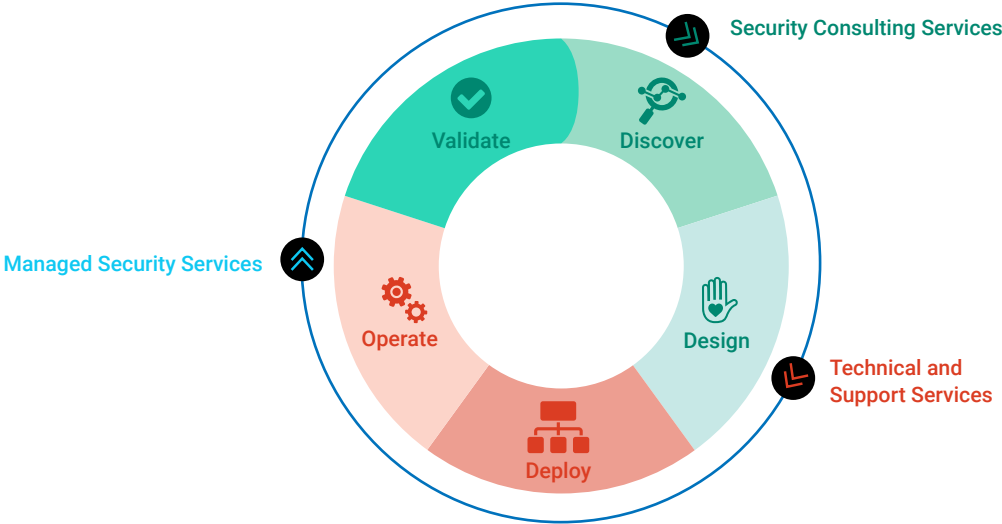

"Secure by Design"

"Seamless deployment"

"Operation and Threat Hunting"

About our solution

Our **Microsoft 365 Security 360°** offering provides a modern security framework across identities, devices, apps, access and data based on **Zero Trust**, enabling employees to work securely from wherever they choose and however they desire.

We enable our clients by helping them to:

- Identify and authenticate employees, users and customers seamlessly.
- Protect devices and the systems people and devices access.
- Understand who has access to what data, applications and systems, when and why.
- Providing the tools that help them to share data and information securely.
- Meet governance, risk and compliance obligations.

Why Microsoft and NTT?

As NTT Ltd., our Security division has expertise across the services and security technology that are needed to support your optimal security posture.

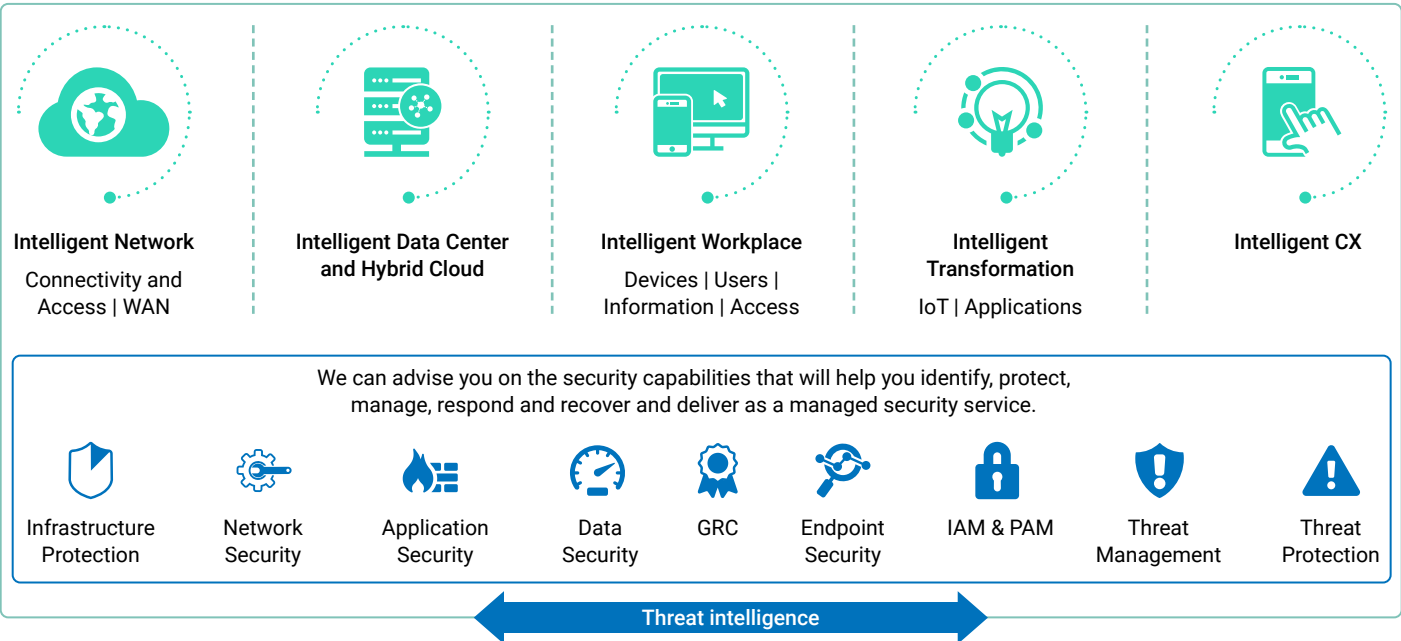

We have a deep understanding of Microsoft business and digital transformation projects, where we craft unique solutions to improve our clients' business performance.

All combined, we are able to deliver Microsoft solutions that have security embedded, so you can be secure by design.

We're focused on our clients' business outcomes as we help them to create an intelligence-driven security posture across their digital business.

This is driven by our secure by design approach which has 5 key pillars:

1. We'll work with you to ensure security is a key tenant of a business' **overall business strategy**.
2. We'll create a **security strategy** aligned to what the business' risk-tolerance is, and in line with what the business wants and needs to achieve.
3. Our experts will help to design and build an **intelligence-driven cybersecurity posture**.
4. We'll help to **build-in, rather than bolt-on security** to digital programs, be it your network, data center, cloud, employee or customer experience digital transformation initiatives.
5. We **design an integrated security architecture** that enables businesses to be agile in the face of a changing threat landscape and technology ecosystem.

## What baseline controls and services are covered by NTT?

Based on the principles and requirements defined in our workshops, there are some things you need to consider and do in order to secure the workplace. Tasks of **Defending, Protecting, Preventing, Detecting, Monitoring, Controlling, Restricting, Enforcing, Analysing and Managing** must fit together.

Our solution ensures your users can work from wherever the desire, however their desire and from whatever device they choose., while addressing the broader business and security requirements. It brings together security across your users, devices, access and information. And addresses compliance requirements of your business.

We give you an overview of the baseline and recommended security controls how NTT sees the Intelligent Workplace. This is based on our analysis of the technology, solutions, threat models and risks. demonstrates a client's workplace ecosystem in the form of a network diagram, what needs to be achieved and the key security considerations in terms of security across each area. It is aligned to the security controls.

Together we do  
great things

## Baseline controls and services for Microsoft solutions

### Baseline Cybersecurity Services

#### Security Consulting Services (CS)

- Cloud Accelerators
  - Microsoft 365 Express Security Check
  - Microsoft 365 Express Compliance Check
- Cybersecurity Advisory (CA)
  - Digital Workplaces
  - Identity & Access Management
  - Threat Intelligence
  - Microsoft 365
  - Hybrid IT
  - Governance, Risk & Compliance
- Security Architecture & Design Services

#### Managed Security Services (MSS)

- Enterprise Security Monitoring (ESM)
- Threat Detection (TD)
- Managed Threat Detection and Response (MDR)
- Vulnerability Management (VM)
- Security Device Management
