Thriving in a hybrid work environment

Intro

No longer a buzzword, the **hybrid working model is being embraced by companies across a range of sectors.** Companies who - either out of convenience or necessity - have cemented this approach into their workplace strategy.

Proof that hybrid working is here to stay, a US survey conducted by FlexJobs in 2021 found that **82% of millenials - who have now surpassed Gen-X in working population - say they would like the option to work from home for the rest of their careers and 34% have left a job because it lacked flexibility.**

Employers are taking note. Future of Work Study by Incisiv found that *the* **hybrid model is expected to grow from 42% (2021) to 81% (2024),** with 70% of CXOs believing it will be their default model.

We are all different, so it makes sense that our style of work would differ too. The beauty of hybrid working is that when there is no one size fits all, there is the power to choose.

But is it a case of giving employees the choice then equipping them with the right collaboration tools and hoping for the best? This e-book will delve into the modern-day challenges of hybrid working and the untapped opportunities companies can now capitalize on with the right repertoire of tools and analytics at their fingertips.

NURA · SPACE

Hybrid working in the digital era

The rise of hybrid working is largely due to advances in digital technologies, which have made **remote work more accessible and efficient than ever before.** With video conferencing, instant messaging, and cloud-based collaboration tools, remote teams can now communicate and collaborate with ease, regardless of their location.

Digitization of workplaces means the argument that employees can't perform the same tasks from home no longer stacks up. Consequently, investing in the right workplace tech has become a priority as **companies seek to balance the benefits of remote work with the advantages of in-person collaboration.**

Challenges of hybrid working

The common sentiment around the challenges associated with hybrid working typically centres around productivity, and of course, connectedness. However, when we were forced into a complete remote working scenario for almost two years, the old misconception that employees need to be seen to perform, was largely contradicted. Whilst productivity was perhaps at times hard to measure however, a more common challenge that arose was that **workers were experiencing burnout compounded by social isolation.**

As a provider of workplace tech that facilitates hybrid working, we live and breathe this concept. We are also out talking to companies large and small about their lived experiences, and here is what we find to be the most prevalent challenges of the hybrid working model.

- Collaboration
- Inclusivity
- Office space utilization
- Productivity

NURA · SPACE
Team collaboration and connectedness

The importance of providing the right tech to allow all employees to succeed from anywhere is well understood. The optimal mix of cloud based platforms and collaboration tools have certainly minimized the level of disruption caused when workers were suddenly forced to work from home. However since returning to the office and offering employees the freedom to arrange their work week between home and the office, **both the traditional assigned desk model and the modern activity based working (ABW) are falling short.**

The traditional fixed desk model is not only inefficient in the new world of work, but it also lacks the **flexibility of team-based working and ability to meet the demands of changing team needs.** For instance, if project teams could plan and sit in close proximity for the duration of the project, this might foster easier and less disruptive collaboration.

If hot-desking sounds like the solution, then think again. **The problem with hot desking is that it is typically a case of 'first in first served',** which is is inherently incompatible with flexible working and even more so with team-based working.

SOLUTION

- Having access to a team focused interface which **gives employees real time visibility of their team's planned movements** on a given day and an overview of where everyone will be sitting eleviates the hassle of being locked into a pre-arranged plan or having to communicate a change of plans after hours.

- If a key benefit of coming into work is for the face-to-face interaction it facilitates, then the ability to **seamlessly coordinate time spent together via a purpose-built tool** ensures teams stay better connected in a more flexible way.

NURA · SPACE

Inclusivity

Hybrid working is undoubtedly a more family friendly work model. Cutting out the commute and obligatory 9-5 physical presence in the office means **employees can easily maintain family commitments** and better juggle their work with their household.

It has also **opened up geographical barriers for employees** and potential talent residing in remote areas. New opportunities arose for talent who once deemed it untennable to commute to the office on a daily basis, or would perhaps be otherwise ruled out as a suitable candidate in the interview process.

With a hybrid working ratio now working in their favour, combined with flexible working hours, it would seem this model is the holy grail for inclusivity. However in a downsized office with a desk booking system, in particular, a 'first-in-first-served' hot desking system, **employees who need to start and finish later risk missing out,** which goes against inclusivity. Think of a parent who does the morning drop-off or a colleague who commutes for over an hour in the morning.

Inclusivity extends to decision-making. It is important to give **all employees the opportunity to be involved in the decision-making process** by setting communications protocols and supporting them to plan in office days to maximize face-to-face interaction.

SOLUTION

- The solution lies with **flexible tech which keeps this in mind and upholds inclusivity.** With the ability to book a desk at any time from anywhere, teams can create neighborhoods where team members can gain priority access to that space and avoid missing out on a workpoint.

- Giving employees visibility of the floorplan with associated bookings allows for **effective planning of time spent in the office,** no matter what hours they work.

NURA · SPACE

Office space utilization

It's not just a case of downsizing, implementing a desk booking system and hoping for the best. **Workplace Managers or Corporate Real-estate Executives want to know if the space is being utilized effectively,** which is an ongoing process.

As the old saying goes, **'if you can't measure it, you can't manage it'.** And if that's the case, then you certainly can't optimize it.
SOLUTION

- With the help of workplace analytics, **Workplace Managers or Corporate Real-estate Executives gain a live snapshot of the floorplan and monitor trends.**

- Setting up a personalized dashboard automatically returns the **metrics they want to see to make informed decisions.**

NURA · SPACE

Productivity

Chopping and changing can disrupt workflow, further exacerbated when staff need to find a desk and get set up every time they come into the office. In fact, a survey found that 4 in 10 US office workers spend around 60 minutes each week looking for desks, conference rooms and their colleagues. Not to mention time wasted searching for a car space and locker upon arrival.

As a general rule of thumb, **time in the office is best spent collaborating and planning as a team, while working from home is ideal for independent working on assigned tasks.** Therefore, depending on the versatility of project requirements, pre-set home/office days might be too rigid for the evolving needs of a team or individual on any given day. Rather, **giving employees the flexibility to choose and plan week to week or day to day allows for the best use of office/home time** and reduces potential frustration of projects not flowing as they should. However, this may require employees to coordinate with each other day by day and limit the flexibility of a last minute change in circumstances.

SOLUTION

- Reducing the 'resource finding' aspect - car space, desk, locker, room - by allowing employees to prebook from anywhere can combat the loss of productivity experienced upon arrival.

- Ability to **plan work weeks in a way that suits individuals and their teams and making this truly flexible** via a tech that negates the need for teams to continually coordinate with each other, but rather view everyone's planned movements in real time and receive notifications of team member bookings.

Untapped opportunities of Hybrid workplaces

In a hybrid world where many desks remain unoccupied some of the time, companies are seizing the opportunity to reduce their office footprint and therefore overheads. In short, there's no reason why this shouldn't be a win-win for all

Downsizing to optimize space utilization

Compared with the traditional fixed desk office model, we estimate that there is a **potential to save 45% in available space under a technology-enabled team based hybrid model, and 25% compared with ABW.** Not to mention the benefits to the employee experience.
This is because under the ABW model, employees get in, store their belongings and float around from task space to task space throughout the day. Then when it comes time for independent working, they need a suitable desk to be available (i.e. the hot desking model). Whilst this is already a win compared to the traditional 1:1 desk model, it requires just-in-time availability of a myriad of resources, whether they are utilized or not. **The technology-enabled hybrid model on the other hand, with the ability to book a workpoint (i.e. desk hoteling) and measure utilization of resources (analytics) offers the 'sweet spot' of matching available space with required space.**

45%
Space saving potential compared to traditional assigned desking

Real estate cost savings

Here is a comparison of the estimated space requirements under the different models and a breakdown of the potential savings offered thanks to space optimization.

	Traditional Office Model	Activity Based Working	Tech Enabled Hybrid
Available space	100 desks per 100 employees	75 desks per 100 employees	55 desks per 100 employees
ft2/employee	30-40 ft2	20-25 ft2	15-20 ft2
Average cost*	$1,200-$1,600 per employee	$800-$1000 per employee	$600-$800 per employee

* Based on a leasing cost of $40 / ft2 in Chicago (source: CBRE)

According to a 2021 survey of 185 corporate real estate decision makers conducted by CBRE, **75% of those responding for large companies (>10,000 or larger) expressed a high demand for flexible open workspaces post-pandemic, with 53% saying they planned a moderate downsize of 10–30%.**

Enhancing the Employee Experience

When it comes to hybrid working, the Employee Experience, or EX, should be top of mind. **Offering employees a choice and complete flexibility about whether to work from home or the office is already a win for their wellbeing.** However, if you want to optimize your office footprint by reducing the number of desks, it pays to consider the EX implications – and solutions! – for better organising their workspace and collaborating with their teams.

> "
> The employee experience is about making your employees' lives easier. Whether it be by giving them the right tools to succeed, empowering them to configure their work environment as they please or prioritizing their health and wellness. Put simply, it's about adopting a people-centric approach.
> "

Samantha Simpson,

Workplace Behavior Expert &
Nura Space Product Owner

For those of us who are somewhat habitual, our desk set up is vital and consistency is key. But if it is no longer viable to have an assigned desk we use only some of the time, **we need to harness technology to help us minimize the friction.** And for a mixed generational workforce, a fragmented mix of workplace tools which are less than user friendly can lead to frustration or reduce the tendency to use them effectively, if at all.

Instead, an integrated platform with a user-friendly interface can increase the uptake and allow for better optimization of the office space.

NURA • SPACE

Employee engagement

According to a survey conducted by FlexJobs, **84% of workers believe that having a flexible job would help them be less stressed. The survey also found that 62% of respondents have left or considered leaving a job because it lacked flexibility.** This suggests that flexibility in the workplace is not only important for job satisfaction but also for retention, as employees may be more likely to stay with a company that offers flexible work arrangements.

This statistic highlights the importance of giving employees the flexibility and trust to structure their work arrangements in a way that works best for them. By allowing employees to make choices that suit their personal and professional needs, companies can **not only increase job satisfaction and engagement but also improve overall productivity and well-being.**

We know that when forced to work from home for an extended period of time, employee engagement suffered due to employees feeling less connected to their company and colleagues. Again, the **hybrid working model strikes the perfect balance between flexibility and connectedness.** That's because workplace culture is more than a workstation and computer, it's the coming together of people in an environment built just for them. Afterall, companies invest significantly in well considered, employee-centric office space for a reason and employees want to enjoy them too.

The question then remains, how do you measure and improve employee engagement on an ongoing basis? There are a myriad of engagement monitoring tools and periodic surveys to measure how employees 'feel', **but what about tools to measure how they 'behave' and utilize the resources available.** With a tech enabled hybrid working model, reporting on the type of metrics around resource utilization and employee behavior your company wants to know becomes an automated process.

84% of workers believe a flexible job would leave them less stressed

62% have considered leaving jobs due to lack of flexibility

NURA · SPACE

Employee wellbeing

According to a 2021 American Psychological Society report, **87% of American workers believe that having control over their work hours and location is important for their mental health and well-being**. This is especially true in the wake of the Global pandemic, which has led many employees to prioritize flexibility and remote working options.

But it doesn't take a study to delineate that **cutting out the daily commute and set office hours does wonders for work-life balance.** According to the U.S. Census Bureau's American Community Survey, the average commute time for workers in the Chicago metropolitan area was 27.6 minutes each way in 2019. Assuming a five-day workweek, this translates to a total of 276 minutes, or 4.6 hours, spent commuting each week.

Global Workplace Analytics suggest that the average American worker saves about 60 minutes, or one hour, per day by working remotely.

While employee wellbeing is now a focus of workplace strategy, the provision of **well-being facilities and family-friendly policies are needed to entice employees back to the office** and show that you value their mental and physical wellbeing in the workplace.

87% of workers believe having control over their work hours and location is important for wellbeing

How to make Hybrid working work

Mapping out your Hybrid workplace strategy is a first step. However, if you want to offer flexibility, it is near impossible to predict exactly how your space will be utilized without technology. Therefore, the strategy needs to be ready to evolve to ensure it is effective and continually optimized. Nura Space can help you plan for the future by forecasting future utilization figures.
Here are some measures to effectively manage a hybrid workplace:

- **Work with line managers to design policies and processes** that suit their teams - build these into a flexible tech like Nura Space.

- **Analyze metrics and take on board employee feedback** to continually improve the employee experience and space utilization.

- **Empower employees with the necessary tools** to make hybrid working as seamless as possible and reduce any barriers to productivity and collaboration.

- **Keep it simple and be selective with the range of workplace tools.** The less fragmented tools you expect employees to use will reduce costs, improve productivity and increase the adoption rate.

- **Ensure the hybrid working policy is inclusive** with strong communication and feedback channels on the organisations hybrid working strategy/rules/policies.

- **Make in-office days count** by harnessing tech to coordinate office days with team members but also avoid overcrowding.

NURA · SPACE

Nura Space has you covered

By using a flexible and scalable Workplace Management Platform (WMP) like Nura Space, teams can design truly robust and adaptable hybrid workplace policies and procedures that suit them. And Facilities Managers can easily measure how the space is being utilized in order to continually optimize it.

Here are just some of the features that make this possible.

Employee Experience (EX):

- Allows all employees to locate and book a suitable desk in advance from anywhere

- Team focussed interface to enhance opportunities for collaboration

NURA • SPACE
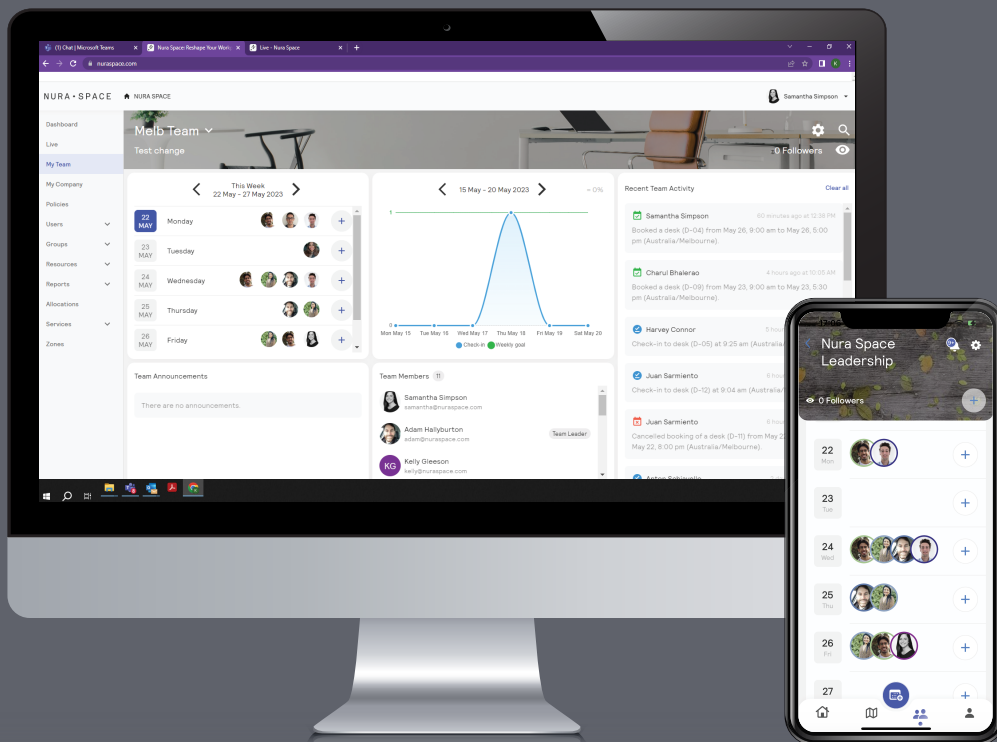

Flexibility:

- Designed with your unique floorplans and hardware

- System admins can easily toggle on and off to enable only features that suit their business/department. Rules can also be set up based on specific hybrid workplace policies, permissions etc.

NURA • SPACE
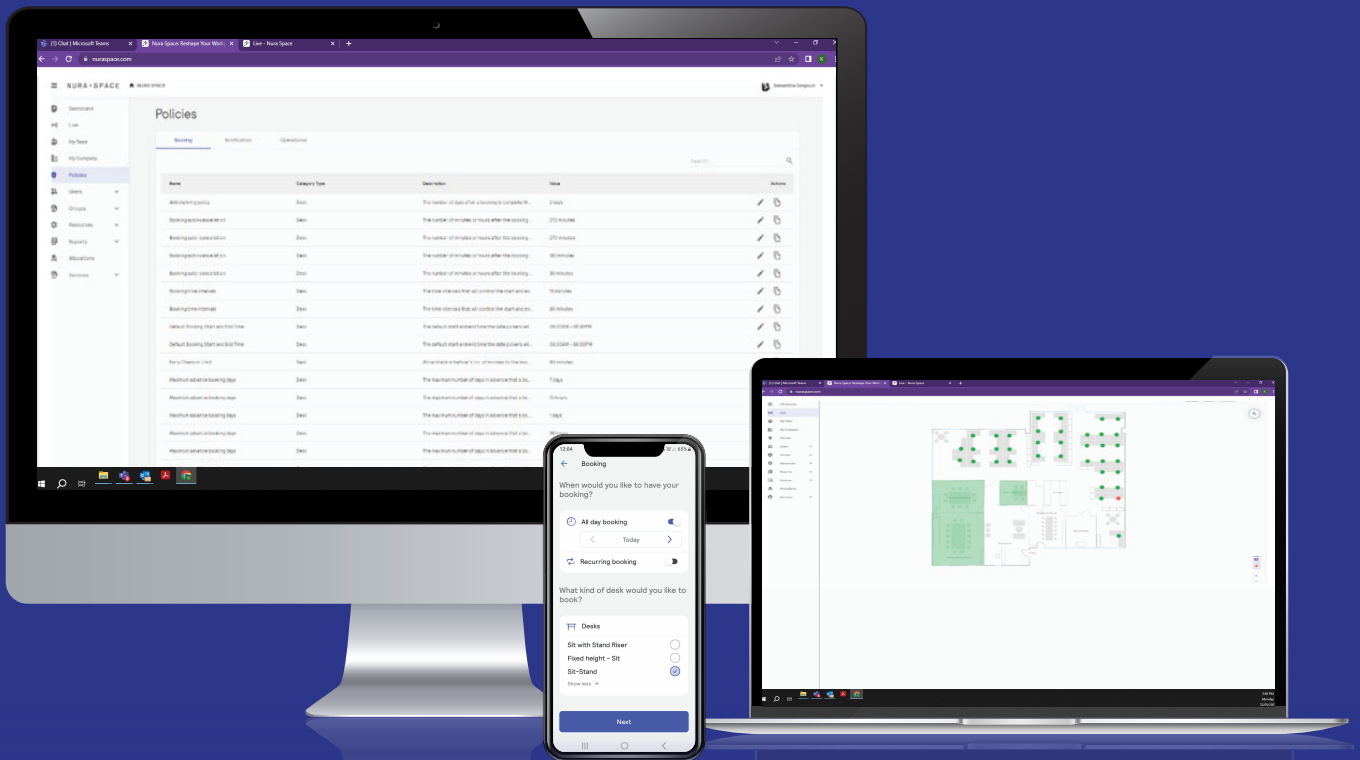

Simplicity:

- Seamless integration with Microsoft Active Directory, Office365, MS Teams and more. API's are available for retrieval of workplace data

- Multiple booking systems built into one - desk, locker, meeting rooms and carpark

Teams

Desk booking

Office 365

Locker booking

Panel sensor

Meeting room booking

NURA · SPACE

Measurability:

- Gives a live snapshot of how the space and resources are being utilized

- Offers dashboards set up with metrics that managers need to see over time to make informed decisions (utilization data, behavioral trends)

NURA • SPACE
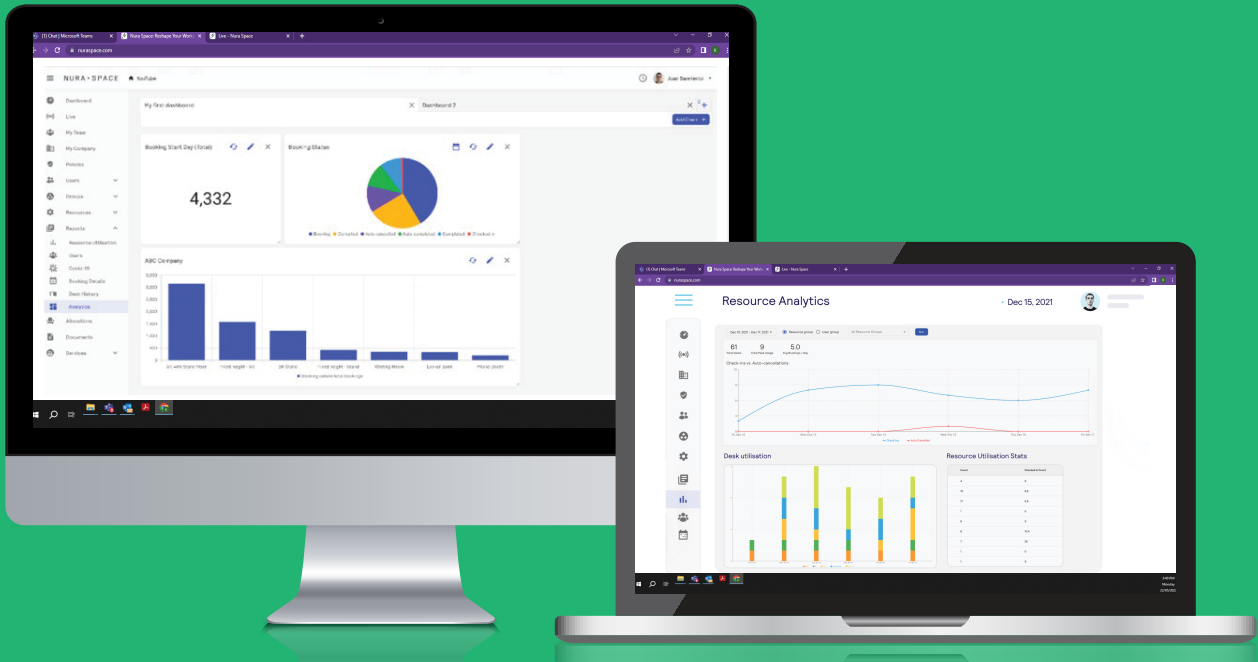

Compliance:

- Shows how many fire wardens or first aiders are on site and exactly where they are sitting at any given time in case of emergency

- Generate automated reports and set up with certain alerts according to a company's safety policies
