

# Microsoft 365 Security Assessment

Validate Microsoft 365 security

**95% of cloud security breaches occur due to misconfiguration with  
60% of businesses closing within six months of a cyberattack\*.**

Uncover hidden risks before attackers do with our Microsoft 365  
Security Assessment.

Increase confidence in your deployment through expert evaluation.

Use the detailed & actionable recommendations to  
enhance your security and compliance position.

\* Gartner reference

Nviron's Microsoft 365 Security Assessment offers an in-depth evaluation of your M365 deployment.

## Report essentials

### Compromised Credentials & Conditional Access

Detect and prevent unauthorised access with a best-practice security configuration.

### Multi Factor Authentication (MFA) Adoption

Strengthen identity protection by ensuring robust authentication policies are in place.

### Email Security & Resilience

Identify weaknesses in email security, prevent phishing and spoofing attacks.

### Monitoring & Threat Protection

Assess your ability to detect and respond to cyber threats in real-time.

### Data Protection & Integrity

Secure your files and collaboration tools to prevent unauthorised data access.

### Reduce the attack surface

Mitigate against the risk of data theft, financial loss, downtime, reputational damage and compliance fines.

### Prepare for compliance or certification

A robust security posture is fundamental to achieving the widely valued and increasingly required accreditations such as GDPR, CE+, NIST and ISO27001.
