

Cloud Security Services

How can we support customers cloud journey with our security services?

NVISO offers services to support customers in their cloud journeys and to **assess, design, and implement security** during all phases of cloud adoption. Our cloud security services can range from an integrated security design in customers' new or existing environments to review their current infrastructures via our standardized security assessments.

AWARENESS

Assess Your Configuration and Architecture

Azure infra, M365, Clusters, CI/CD pipelines

VALIDATION

Deliver Microsoft Engagements

Data Security, Microsoft Sentinel, Threat Protection

Thanks to our CSI partnership

IMPLEMENTATION

Securely Design Your Environment & Create Structural Roadmaps

Cloud Secure Design

Cloud Security Governance & Roadmap

Implement and Adjust Security Services and Controls

Cloud Security Engineering Projects

MANAGED

Managed Detect & Respond, Managed Cloud Security

Cloud Security Compliance Monitoring

Microsoft-based MDR Service

Technologies we work with

Data governance and Information protection – features and maturity

Based on your Data Protection and Governance priority and maturity, Nviso can support you in designing and implementing labels and policies to control data across your environment. We advice to focus on the below topics, depending on your current data management posture. The goal of this support will be to have *out of the box* Sensitivity labels and Retention policies as well as Data Loss Prevention Policies tested and validated in your production environment.

In an advanced state of configuration, we can support you in automating labelling assignment and fine-tune DLP policies. Lastly, we will create custom labels and policies based on your specific needs, to tailor data security on your very activity.

FOCUS ON THE
MODULES
THAT ARE MOST
RELEVANT TO YOU

STARTER

Sensitivity Labels

Retention Policies

Basic DLP Policies

Insider Risks

ADVANCED

Labelling automation

Advanced DLP Policies

Custom Policies

Design and Configure – Deliverables of our support

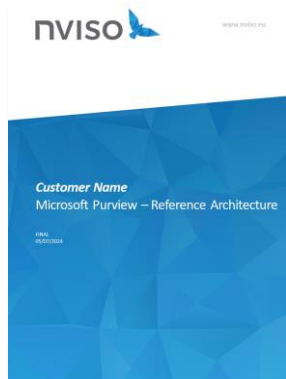

All material produced during and for the project will be shared with you to keep track of all the evolutionary deployment. Furthermore, a final document reporting all design decisions and the implementation guideline will be delivered at the end of the engagement. If requested, a playbook to support Business As Usual during operations can be produced as a separate document.

Workshop material and summary of the output

Slides and key notes taken during the meetings will be shared with you

- ✦ Reference Architecture per each functionality in scope
(Description of design decisions and their rationale)
- ✦ Implementation Guideline
(Installation Manual)
- ✦ Operations Manual (Optional)

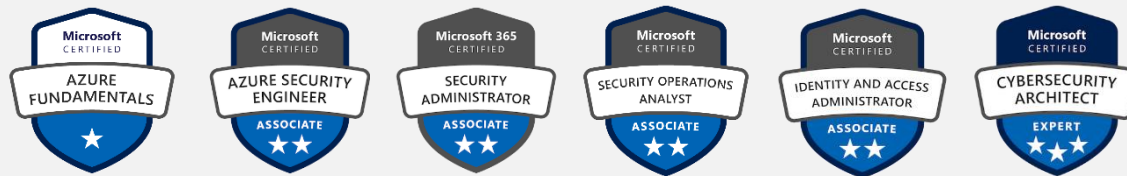

How and where we can help you

NVISO and Microsoft, a strong partnership

NVISO has a dedicated team of Microsoft Cloud engineers that supports our clients with the configuration and implementation of security features in Azure and Microsoft 365. Our widely certified engineers can be made available to support you with your cloud journey and increase your cloud security posture. The Nviso cloud security expert pool, a team of highly skilled expert professionals, assists and supports our cloud engineers.

NVISO is a Microsoft Solutions Partner for Cloud Security

Besides that, Nviso is a Microsoft Solutions Partner with specialty in Cloud Security, and invested in Microsoft certifications for our employees. Our expertise in Microsoft solutions includes a wide range of services on different Microsoft products.
