

01 Helping organizations to improve their identity and access management posture.

AZURE ACTIVE DIRECTORY ASSESSMENT

www.oakwoodsys.com

ANALYZING ACTIVE DIRECTORY POLICIES & CONFIGURATION

EXPECTED OUTCOME:

- Better understanding of your Azure Active Directory environment.
- Identify any existing gaps in recommended practices for a secure Azure AD environment.
- Improve Identity and Access Management Posture.
- Delivery of an executive summary with a roadmap to remediation (as appropriate).

Oakwood's Azure Active Directory Assessment is based on your specific environment and will help your organization understand and improve your Azure Active Directory (Azure AD) environment by analyzing your configuration and policies.

Oakwood's Azure experts help you to identify and assess your Azure AD environment to quickly provide insights and recommendations. Throughout this engagement, we'll focus on the following areas; Identity Management, Access Management, Security, Governance, and Operations.

At the onset of the assessment, data is collected via a combination of workshop-style meeting(s) and tools (NetDetective) and analyzed to identify deviations from Microsoft's recommendations. These findings are combined with Oakwood's recommended practices based on our experience with previous implementations. We'll provide reports with comments and recommendations tailored to your specific environment.

At the conclusion of the assessment, we'll deliver an executive summary and build a roadmap to remediation.
