Modern Managed Workplace Solution

Provide employees with a secure modern workplace anywhere & anytime

Businesses these days are looking for an easy and efficient way of provisioning a flexible and secure environment for their users to work in. Unfortunately there is no such thing as a "one-size-fits-all" business profile.

Users want to work with any device of their choice at any time at any location certainly in these challenging COVID-19 times where working remotely is a new challenge for a lot of businesses.

As technology evolves, a lot of IT departments struggle to keep up with this new way of working, while maintaining security and compliance, at the same time while minimizing the impact for the end user.

Changing your environment to a managed modern workplace is a journey.

Every organization is different. Some benefit from a cloud-only approach, others gain more from a hybrid co-managed infrastructure.

"Implementing a modern workplace is key to keep enabling your workforce to excel"

- Kenny Buntinx, CEO, OB-V-US -

IT'S OBVIOUS

How your business benefits from a Modern Managed Workplace.

Delivering a modern workplace is a journey and so much more than just delivering a device with a modern operating system like Windows 10. This requires a holistic approach to tackle various challenges. Customer concerns today are:

∨ Spending a significant amount of their budgets and resources to maintain legacy IT systems through maintenance and low-value upgrades.

∨ Finding cost savings, increase productivity, employee retention/attraction and increase security and compliance.

Roadmap	Security	Lifecycle	Tooling	Compliancy & Provisioning
Get a clear view on the future workplace	Increase your workplace security	Let's see what's coming and when	Having the right tools is crucial	Let's make life easier

With our OB-∨-US solution:

∨ Customers can onboard new and refresh PCs to be enterprise-ready via a simple self-service experience in Windows AutoPilot

∨ Customer deployments can be simplified by Windows and Office compatibility and readiness analytics giving reductions in testing and integration risks

∨ Customers can reduce costs by simplifying management using Intune and ConfigMgr Co-management
