

# Smart. Efficient. Done. That's Atlas AI.

The quality reports you expect, and your patients deserve.

## Cut Through the Data Overload

In a two-year study analyzing 384,796 transmissions across 67 locations, Atlas AI and clinical experts identified 57% of transmissions as redundant and non-actionable, ensuring clinicians received only the actionable 47%, representing:

- 31% routine, billable transmissions
- 13% contained critical clinical alerts

By reducing report burden, Atlas AI helps clinicians minimize data overload, prioritize critical cases, and focus on delivering better patient care.
