# Microsoft 365 Identity & Access Management to improve and streamline security

Many organizations seek a solution to protect corporate data, which end-users can access from any device. They require a solution for managing devices, applications, software updates, with flexibility and easy of management.

Microsoft 365 cloud-based services focuses on Mobile Device Management (MDM) and Mobile Application Management (MAM), for every device. They allow to control how the devices are used, regardless of the operating system, to manage applications through specific security policies and to use of personal devices, as they provide the ability to securely isolate personal from corporate data and maximize data protection.
