

Copilot Enablement

1-Week Assessment

Save time
and improve
efficiency by
deploying AI
correctly in your
organisation.

Overview

In today's competitive and fast-paced business environment, utilising Copilot is essential for enterprise and SMB customers who want to leverage the power of AI.

Deployed correctly, Microsoft Co-Pilot can deliver real benefits to daily tasks and more complex activities including searching corporate data; creating emails, campaigns and documents; summarising complex data; and even creating code for example.

Copilot products can reduce the weight of workloads, improve productivity and creativity for many users and departments. As Copilot products are newly emerging, organisations should enable themselves to adopt these technologies early and champion change internally.

Key benefits

- 

Demonstrate Copilot products that are applicable to individual use cases on an organisational level
- 

Introduce a structured approach to using AI
- 

Prove specific use cases and benefits in a controlled way
- 

Instil confidence in the capability of AI for early adopters
- 

Get the most from your investment in Copilot licences

This engagement includes:

Licence guidance and support

Policy advice and creation

End user roles and permissions

Product configuration

Training and support options

Complementary add-ons for this engagement include:

AI Readiness Engagement

Scope

In this engagement, we will help customers to enable different Copilot products by covering the following areas:

License purchase and Assignment

Establishing policies for office applications and channel updates

Enabling users with custom permissions

Reviewing and enabling product settings

Enabling early adoption through training and support

Structure

All Ogi Cloud Engagements have a consistent structure designed to deliver customer-value against a set of agreed success criteria. These are measurable and unique to each customer, driven by their priorities, organisational culture, and mission. Our approach is based on Microsoft's Service Adoption Framework and consists of three main stages; Envision, Implement, and Enable.

Envision

Envisioning consists of determining with the customer the required scope of the engagement and establishing the necessary involvement from interested parties and stakeholders. Typically conducted through a workshop session but can also be an initial call/remote session.

This will cover:

- Provide pre-sale demonstrations of each Copilot product
- Exploring customer requirements and drivers for Copilot
- Exploring and reviewing processes and likely impacts – risks and benefits
- Showcasing benefits of early adoption vs full enablement
- Review of existing environment and licenses
- Review of best practice recommendations and policy decisions
- Agreement as to proposed timeframe and strategy for user engagement

Key outputs:

- Confirmation of pre-requisites in place
- Implementation plan covering:
 - Agreed policies/best practice changes to be made
 - Impacted workflows and users
 - Roll-out timetable
 - Early adopter training requirements

Requirements:

Typically half-day Senior Cloud engineer and half-day Project Manager

Copilot Enablement

1-Week Assessment

Implement

This stage takes place over one week depending on the customer involvement and availability for change windows and includes the following key activities/deliverables:

Purchase and deploy licences to early adoption group

Create configuration profiles for Copilot applications

Deploy specific applications related to Copilot products

Implement features for Copilot products

Requirement

1 day Cloud Engineer depending on organisational requirements, and Half-Day Project Manager

Enable

Early Adopter training and materials

In-place demonstration of product in the customers organisation

Handover session detailing steps taken and next steps

Requirement

Half-day Cloud Engineer – additional half-day for remote training

Agenda timeframe

(Accelerated – actual depends on customer involvement)

Week 1

Day 1 Envision session, produce outputs and produce and agree Implementation Plan

Day 2 Implement policies and applications, provide training and documentation, handover session

Let's hold a no obligation discovery call to see how we can help.
