

Improve your organizations security posture by learning about the key components of Microsoft 365 Security

Learn about the primary security features in Microsoft 365, and how to use them to protect your organization. Microsoft 365 Defender offers a unified suite of security functionality that helps you coordinate detection, prevention, and response across your organization.

Why you should attend

Given the volume and complexity of today's security threats, it's important to understand the tools available to you in the Microsoft 365 security suite, and how to best leverage those tools to properly protect your environment.

Who should attend

Chief Information Security Officer (CISO) IT Operations
Data Governance Officers Data Protection stakeholders
Chief Information Officer (CIO) Chief Security Officer (CSO)

Microsoft 365 Solutions covered:

Defender for Office 365
Defender for Cloud Apps
Defender Vulnerability Management
Defender for Endpoint

During this workshop, we will help you understand how to protect your organization through:

- Reviewing existing alerts and incidents, analyzing results, and assisting with remediation
- Demonstrating data classification and information protection policies
- Configuring and testing data loss prevention policies
- Using Advanced Hunting to search for ransomware and malware across your organization
- Demonstrating Automated Incident and response
- Introducing Microsoft Defender for Endpoint and discovering how it works with the other parts of the Microsoft 365 security suite
- Investigating how Defender for Endpoint and Intune can work with the Microsoft 365 Security Center to offer a single pane of glass for security management
- Reviewing security defaults and Microsoft security best practices

One-day workshop: \$2,500
