

Omega Microsoft CVI Solutions

Cloud Video Interop for Microsoft Teams

Cloud Video Interop (CVI) is a Microsoft Qualified third-party solution that enables standards-based video conference rooms and personal video devices to join Microsoft Teams meetings.

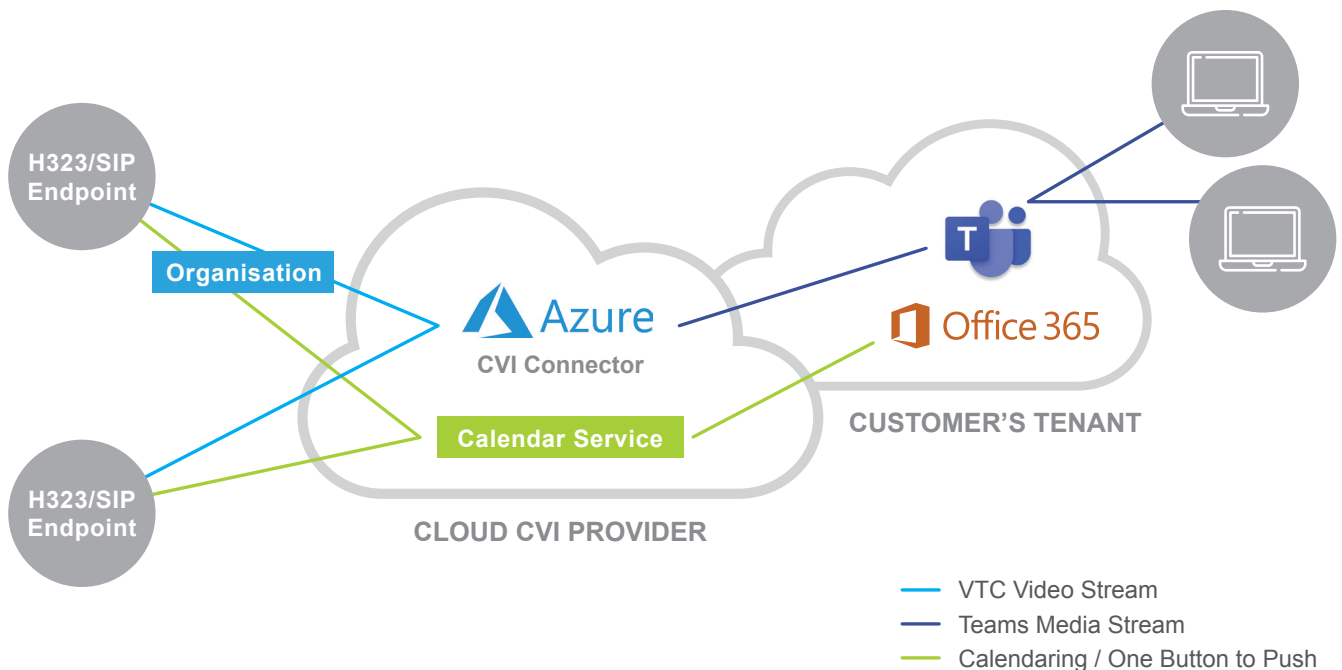

Many customers have already invested in video conferencing and personal video communication devices - which can be expensive to upgrade. Cloud Video Interop provides an easy solution, allowing you to keep using your existing solutions and integrate them with Microsoft Teams. With Cloud Video Interop, Microsoft Teams delivers a native meeting experience for all participants – in meeting rooms or Teams clients.

Is Cloud Video Interop for me?

Cloud Video Interop provides an intermediate service while you transition to a full native Microsoft Teams Solution, using Teams endpoints. Cloud Video Interop enables you to invite standards-based systems outside of your organisation to join your Teams meeting.

KEY FEATURES AND BENEFITS:

- One-touch dial
- Support for H323 and SIP Systems
- Simple to use, deploy and manage
- Licence and usage reporting
- Support for dual screen rooms
- Support for content sharing
