- 98% to 100% accuracy

Reusable

- Easier process for returning users
- PIN use to confirm age check results
- Uses less resources

Complete Coverage

- Onboarding in 30 seconds
- Automatic checks
- No additional IT resources needed for implementation
- Get started in just 24 hours or get customised integration within one week
- 24/7 support

“Ondato is a trusted and valued business partner. Their market leading age and identity verification technology is a key element of OnlyFans’ safety controls.”

– OnlyFans

In 2020, the amount of total fraud losses climbed to \$56 billion. Identity fraud accounted for \$43 billion of that cost.

ondata

Emerging Challenge

Age verification checks are cumbersome and resource heavy.

New regulations require companies to confirm age without storing personal data.

Our Solution

A quick and reusable age verification tool.

OnAge employs unique internet consumer identification technology, allowing for the process to be completely anonymous.

Guaranteed Result

Reusable age verification saves on resources, eliminating the need to complete verification every single time, which also minimises returning user drop-offs.

Complete age checks with 98% to 100% accuracy without storing any identifiable information, completely adhering to regulations around the world.

With OnlyFans, we provide a solution with transparent information on user data. Alongside OnlyFans developers, we have adapted the infrastructure of our solutions to ensure the security of the onboarding process while maintaining user satisfaction.

“Ondato is a trusted and valued business partner. Their market leading age and identity verification technology is a key element of OnlyFans’ safety controls. We enjoy the close working relationship we have with their team and we know that they value our feedback and reflect this in their product roadmap.” - OnlyFans

Achieved Results

Reusability

100% anonymity

Resource saving

Adult content platform

An adult content platform required an age verification solution that prioritized **complete anonymity**, ensuring their users could access the service while feeling safe and protected. Recognising the sensitive nature of their content and the privacy concerns of their audience, they sought a solution that avoided storing any personal information.

Ondato provided an innovative, reusable solution that met these needs by confirming users' age without retaining or exposing their sensitive data. Using advanced verification techniques, Ondato allowed the platform to confirm the age of each user during their initial interaction, then securely validate their eligibility on subsequent visits.

Gaming service

A gaming company required a solution to quickly authenticate returning users, aiming to minimize user drop-offs and enhance overall retention. Their priority was to create a seamless login experience that balanced speed with necessary compliance.

Ondato delivered a streamlined solution that enables returning users to authenticate instantly using a secure PIN. This approach ensures a fast and hassle-free login process while maintaining age validation protocols. By eliminating the need for repetitive and lengthy verification steps, Ondato's system significantly reduced friction in the user journey. This solution not only improved the user experience by encouraging quick re-entry into the platform but also helped the company maintain compliance with age-restriction laws.
