# Learn how Pimee uses OLS360 to make its workforce safer

It was evident that Pimee Well Servicing was a company at the forefront of innovation. They sought our advice on improving their operations, focusing firstly on safety practices and HR procedures. We recommended that the company switch to centralized processing using OLS360 and a Power BI reporting strategy. Hence, all processes are in one place while eliminating any redundancy or

waste associated with carrying multiple software solutions. Pimee's digital transformation sets up the business perfectly to continue leading within its field years down the line. It also empowers team members today who can reach new performance levels by having everything at hand when needed - ensuring workplace HR and safety regulations.

## AT A GLANCE

Customer: Pimee Well Servicing LP

Website: <https://www.pimee.com>

Customer Size: 150-200

Country: Canada, Alberta

Industry: Energy

Products and Services: Microsoft Azure, Microsoft Power BI

# OLS360 Safe Workforce, Pimee Well Servicing, & Power BI

## Customer Challenges

Pimee Well Servicing has been an Aboriginal leader in the oil & gas industry since 1984; they are proud to deliver safe, competitive and high-quality services to the major oil producers in Canada.

Pimee asked us for advice on how to streamline their operations, focusing first on their Safety and HR practices which are strongly regulated. They felt that too many disconnected systems, spreadsheets and excessive manual steps overload key team members. The goal was to save employees time, enhance business transparency, and reduce expenses on software licensing.

## Partner Solution

We recommended that Pimee centralize its processes using OLS360 and integrate them with a Microsoft Power BI reporting strategy.

With that, safety supervisors can perform incident investigations, record emergency drills, and any worker can provide safety observations. HR managers can manage employee absences and prevent worker's certificates from expiring. And management can use powerful data insights to drill down on employee data, safety practices and what is happening in the field.

## Customer Benefits

At Pimee, worker safety and business compliance come first. By adopting OLS360 and Power BI, Pimee has rapidly modernized its operations. Redundant systems and manual steps have been eliminated, and almost thirty business processes have been integrated into one place, shared by those who need access, and even better, under one single subscription.

Pimee's digital transformation empowers its teams to reach new performance levels, saves them time and money, and ensures that the workplace is safe and monitored.

Keep your workers safe and compliant with regulations. Track safety incidents and near misses. Get safety observations from any worker. Ensure the business is prepared for any emergencies.

Have peace of mind that comes with knowing your workers are always taken care of. Manage workers' planned and unplanned absences. Monitor worker certificates and prevent them from expiring.

Finding the right insights from your data is key to your success. Bring business transparency with powerful data reports. Have the details of operations in your hands.
