

Simplify High Performance Telecoms

OneView gives enterprises in-depth visibility and full control over their telecoms usage, spend and service provider performance. OneView is a Microsoft certified, multivendor system that provides an independent view and always stays up to date with market trends and business needs.

OneView Product Description

OneView is a Microsoft certified, cloud-based, Telecoms Lifecycle Management system. Through integration with service providers, OneView enables automated data collection, enrichment and verification of enterprise usage, spend and vendor performance.

OneView also integrates with your 3rd party business applications to take the complexity out of managing isolated telecoms and IT operations.

OneView Results

Leading South Africa Bank

- 20% decrease year-on-year in telecoms cost per branch saving in direct fixed voice costs, which included branch footprint growth of 17%
- 43% saving year-on-year in APN Mobile data costs whilst the number of users increased by 15%
- Significant decrease in indirect cost as 300 users decrease their claim time with over 90%

Multinational manufacturing company

- Within six months, Nebula lowered the client's out of APN data costs by 72%
- Roaming cost decreased by 48%
- Overall mobile cost decreased by 46%
- Indirect cost decreased by 80%

Why OneView ?

- Telecoms Strategy
- Telecoms Expense and Life Cycle Management
- Integration into providers and customer applications and processes
- Cloud sales through CSP

Leading global professional services firm

- Client annual mobile voice & data bill 51% direct cost savings despite 144% increase in mobile data usage
- Improved and increased visibility and management over the deployment and usage of the over 4,000 SIM based devices deployed nationally leading to 53% indirect cost savings due to process automation

With Nebula, we have real time visibility on what is happening, allowing us to make decisions and changes before we get the bill at the end of the month. In the first month we reduced our overall bill by 26% per month, simply by monitoring what was going on.

- Jacques Barkhuizen - Former CIO, Deloitte SA

With Azure, OneView can fully leverage the advantages of the cloud to provide our clients with a high performance, scalable system that enables next generation telecoms and business innovation.

Resilient and robust system fully hosted in the cloud

- Clients experience a system with high availability and performance

Software development is more agile, granular and decoupled

- Product innovation is increased by the ease of expanding the system and its functionalities

A system with increased ability to process large amounts of data and traffic without compromising on performance.

- Optimised customer experience and satisfaction.

OneView

Our promise to you

- Direct and indirect return on investment
- Operational simplification
- Highlighting and minimising risks
- Compliance enablement
- Accurate and pro-active decision support
- Real time integrated enterprise visibility
- A custom, user-friendly interface

OneView Client

Desired Business Outcomes with Microsoft Azure

- Rapidly Expanding Client Base
- Increased Product Innovation
- Fully Cloud-Based High Performance System

Why Nebula ?

Nebula is a leading telecoms innovations firm striving to redefine how high performance telecoms can play a role in successful business strategies. At our core, we are passionate about the achievement and success of our clients. Nebula offers a unique set of next generation telecoms solutions to give your organisation enhanced capability to manage and optimise your entire telecoms environment.

Simplify application delivery through agile cloud development

48Software is a Cloud Development Team that simplifies application delivery through agile cloud development. The 48Software team takes advantage of cloud components and Surge Cloud Platform to develop and deploy highly scalable and secure products while creating a collaborative learning environment

48Software, Surge Cloud Platform™

We provide companies with a digital transformation strategy based on business needs and develop fully integrated and customer-centric digitalisation solutions using Surge Cloud Platform™.

Why Surge Cloud Platform™?

- Accelerate your Go-To-Market
- Fast Track Cloud App Development
- Cloud Identity Management using Identity Server and AD
- Optimize User Experience

Cloud Best Practice

- A new approach to addressing complex and ever-changing business needs with best of breed, innovative cloud technologies.
- Always up to date and latest stable technology, giving you more power to innovate.

Resilient and robust solution fully hosted in the cloud

Agile Development

- The ability to address needs with much higher speed and scale your output.
- A highly trained and skilled development team
- Agile delivery via a SCRUM Methodology

A flexible solution that allows ease of continuous innovation

Surge Cloud Platform™

- A digitalisation platform with high availability and performance
- Take advantage of pre-fabricated microservices to fast track the development of Cloud Applications

Accelerated Cloud Application Development

“Azure’s Cloud Components have allowed us to build Surge Cloud Platform to fast track our customers’ go-to-market, by providing the fundamental services that enable core app functionality”

– Andre Witte, CIO, Nebula
