What Can 1Path's GoDesk Do For Your Business?

Customers who want to empower their employees to be more productive on the go, or across devices, will find many user experience benefits with 1Path's GoDesk. GoDesk can also reduce cost through infrastructure and management savings. 1Path will provide public cloud hosted virtual desktop machines comprising compute resources (CPU+RAM), disk storage, profile storage, profile snapshots, and Internet connectivity with a publicly accessible frontend.

1Path GoDesk

A modern cloud-based virtual desktop
powered by Microsoft Azure

1Path's GoDesk increases productivity by providing employees access to the tools they need, from anywhere, on any eligible device. And because GoDesk is built by 1Path, security comes standard and is easily managed. GoDesk helps clients improve user experience, overall ease of management, security posture, and ultimately their technology spend.

GoDesk helps our client's tools to keep up with the demands of their employees on-the-go workstyle. This solution gives them access to their desktop from anywhere with an internet connection on whatever device. Allow them to personalize user experiences with custom permissions controls and even prioritize special users or workloads. And to back it all up, GoDesk provides standard security features like MFA, role-based access controls, and other tools.

Allow your clients to save on IT overhead with GoDesk by letting Microsoft assume many of the management features like gateway and brokering management. With GoDesk they can "right-size" their desktop environment and only pay for what they need. Plus, GoDesk is the only way to get multi-session Windows 10 Azure compute resources.

User Experience

1Path's GoDesk provides users with a full Windows 10 experience and is optimized for Office. Users get full functionality of their apps and enjoy features like file history in Office Apps and Outlook search.

Ease Of Management

Easily define each employee's desktop by modifying user permissions and access through a single management plane. You'll also be able to quickly add new users so you can get new employees set up without delay.

Enhanced Security

GoDesk comes with 1Path's Av Defender and Endpoint Threat Detection. Combine 1Path's SecureID solution, and You will be able to protect your business with features like multi-factor authentication and role-based access control.

Superior Economics

It is the only desktop virtualization technology that provides Windows 10 at multi-session cost. You can also use qualifying Microsoft 365 licenses to save money on Windows licenses.

Ask Yourself:

- "Are you aware of how 1Path's GoDesk can help you empower your employees to work remotely?"
- "Do you have concerns about keeping sensitive customer information secure?"
- "Do you currently use a desktop virtualization solution like RDS or VDI?"

By migrating from VDI running on-premises to cloud-based 1Path's GoDesk, customers reduced their prior VDI licensing and IT infrastructure costs by up to 34% annually. Customers eliminated RDS associated costs, including licensing, on-premises servers and maintenance fees, and network and power costs. Additionally, customers could stop buying employer-owned PCs for 25% of 1Path's GoDesk end users who instead used their own personal devices.

"When you are used to doing transactions face to face and suddenly cannot, it shocks your whole business process. We were fortunate to partner with 1Path to address these issues and keep the business moving forward."

- Kathy Verde, Firm Administrator
