# Training In Power Platform & Copilot Studio

Accelerate your organization's digital transformation with OntargIT's **Power Platform & Copilot Studio User Training.** This comprehensive, instructor-led program equips your IT specialists and business professionals with the skills needed to create low-code applications, automate business workflows, and leverage AI capabilities through Microsoft Copilot Studio.

Over several interactive sessions, participants will gain a practical understanding of Power Platform's core tools — **Power Apps, Power Automate, and Copilot Studio.** The training combines expert-led instruction, hands-on exercises, and real-world business examples to help users quickly build and deploy applications tailored to their organizational needs.

The course focuses on empowering business users to take ownership of digital innovation — enabling teams to automate routine operations, enhance data visibility, and make informed, data-driven decisions without deep technical expertise. Participants will leave with not only practical experience but also ready-to-use templates and best practices for ongoing Power Platform adoption.

## Who should attend:

IT professionals, system administrators, and technical leads

Business users and department managers aiming to automate workflows

Organizations introducing low-code and Copilot tools into daily operations
