Ontinue

Ontinue ION MXDR

What Makes Us Different

AI That Understands Your Environment
ION IQ, our proprietary AI platform, enables us to localize our service and accelerate automation based on insight into our customers' environmental and operational realities.

Fast, Seamless Collaboration
Ontinue ION acts as a true extension of your team through our one-of-a-kind Microsoft Teams-based collaboration model. This enables our customers to collaborate in real-time with our Defenders, Advisors, and our AI for faster decision-making and access to information.

Specialized Expertise
Ontinue ION is purpose-built for organizations who want to consolidate their security stack using Microsoft's XDR and SIEM ecosystem. Our unmatched Microsoft expertise and focus on operationalizing the Microsoft 365 Defender suite and Microsoft Sentinel empowers customers to get rid of redundant security controls and reduce their data ingestion costs.

Managed security needs to understand your environment as well as the threats you face.

In response to the rapidly evolving threat landscape, organizations are employing MDR providers in record numbers for their expertise and experience. However, without an in-depth understanding of the environment being protected, defense will always be on the back foot. In the past, it's been very difficult for external providers to achieve that depth of understanding, resulting in more burden on overworked security teams and delays in incident investigation and resolution..

Nonstop SecOps with AI-Powered MXDR

Ontinue ION is an MXDR service built to make security teams faster, more proactive, and more efficient. The ION service brings together the AI-powered ION platform and the ION Cyber Defense Center, our globally distributed security operation. At the core of ION is ION IQ, our proprietary artificial intelligence that makes everybody smarter—your teams, our teams, even other AIs. It does this by building a deep understanding of your environment, your people, your operations, and your risks. The insights generated from ION IQ are integrated into nearly every aspect of ION, from helping our Cyber Defenders to prioritize incidents and respond confidently without risking impact to your business, to identifying and defining new automation workflows in our SOC.

With an entire SecOps team backed by our unique proprietary AI focused on tailoring security to your needs, Ontinue ION delivers faster mean time to resolve and lower security total cost of ownership while driving smarter proactive prevention.

Deep Expertise in Microsoft

As the winner of both the Microsoft Security Services Innovator of the Year Award and the Microsoft Social Impact Partner of the Year Award for 2023, Ontinue ION and our add-on services are purpose-built for the Microsoft Security product portfolio. Ontinue has also been recognized by the Microsoft Intelligent Security Association (MISA) as a Microsoft Certified Managed XDR Solution.
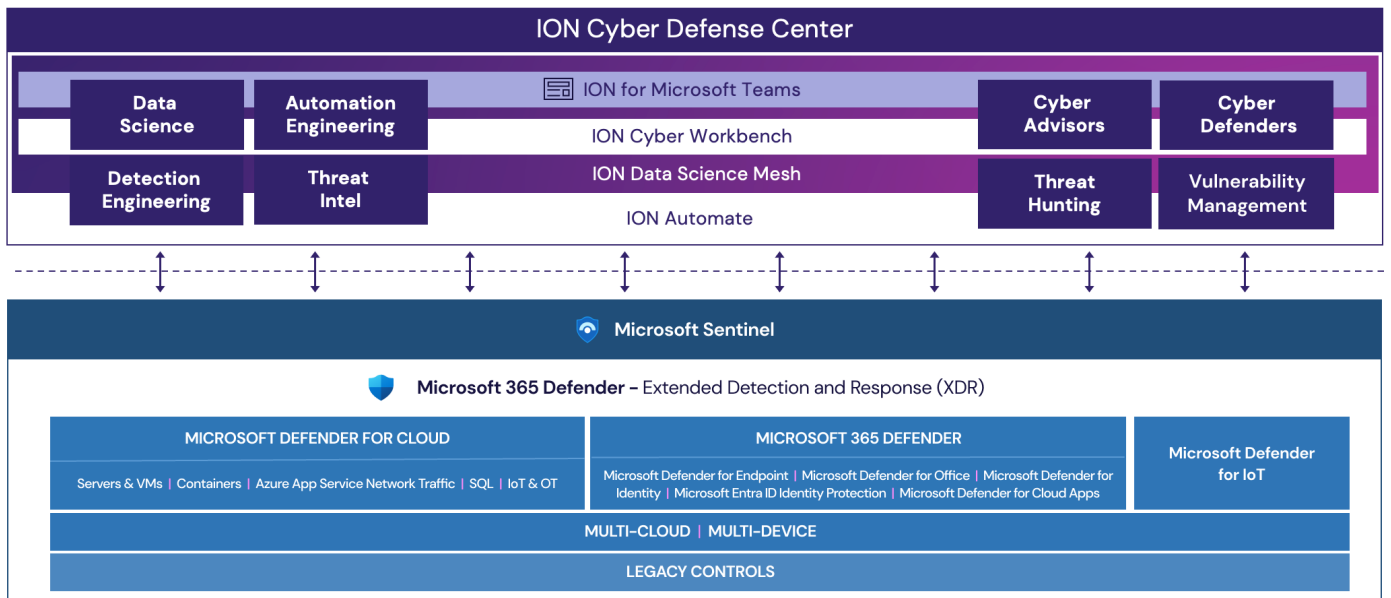

The Outcomes You Need

Ontinue ION combines the following security benefits to respond to attacks fast and continuously reduce risk.

- **Detect and Respond Right Away:** Reduce your mean time to resolve security incidents using real-time collaboration and AI-powered automation that eliminates noise, focuses efforts, and keeps everyone on the same page.
- **Lower Your Security Total Cost of Ownership:** Retire redundant controls, reduce SecOps data costs, and lower your security TCO.
- **Gain a SecOps Force Multiplier:** Our Cyber Defense Center is more than a SOC: it brings together security experts, PhD data scientists, and software developers to continually execute, measure, and optimize security operations on your behalf.
- **Reduce Risk Through Smarter Prevention:** Improve security program efficacy and scalability by focusing prevention activities with highly localized, actionable recommendations from designated Cyber Advisors.

An Overview of Ontinue ION

The ION service brings together the ION cloud-native platform, the ION Cyber Defense Center, and the power of generative AI with ION IQ. Making full use of the Microsoft Security portfolio of products, ION is the MXDR service that understands your environment to deliver greater SecOps efficiencies, proactive prevention, faster response times, and lower security TCO.
