

Dynamic Cybersecurity  
Management Platform

With new industry regulations, like the SEC cybersecurity rule, **effective cybersecurity risk and operational management are more critical now than ever**. Yet to this day, CISOs are often relying on spreadsheets to manually manage and report on their security programs.

Onyxia delivers **an intelligent management platform** that allows CISOs and security leaders to continually measure program performance, achieve organizational compliance, and optimize tech stack coverage. Our Cybersecurity Management platform, recognized as a sample vendor by Gartner, incorporates Cyber Defense Planning and Optimization (CDPO), Exposure Management, and Cybersecurity Mesh Architecture.

## Strengthen Your High-Level Security Strategy and Day-to-Day Program Management

### Automate Your Tailor-Made Program Assessment

Measure the metrics that matter to you most, compare your security program across industry benchmarks, and continuously evaluate previous program performance with a matter of clicks.

### Shine a Light on Your Security Stack Coverage

Our Security Stack Map (SSM), makes it easy to identify gaps, overlaps, and redundancies in tool coverage, adhere to compliance frameworks, and make your tech stack as efficient and effective as possible.

### Effectively Demonstrate Business Value

Quickly pull customized reports, demonstrate compliance with industry regulations and effortlessly communicate the most important business outcomes.

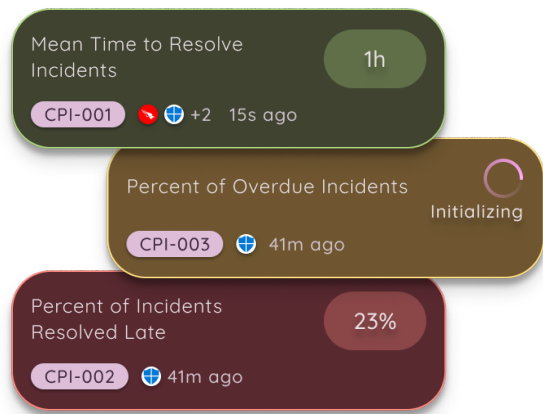

### Harness AI to Reduce Risks and Threat Exposure

Onyxia effectively utilizes artificial intelligence to your advantage. Reduce threat exposure with actionable insights and intelligent program predictions.

“ Onyxia's mission is simply one of data-driven decision-making and visibility...this platform has been designed from the ground up to support tactical leadership and strategic decision making.”

- Chris Roberts,  
CISO at Boom Supersonic

## A Platform Designed with You in Mind

### Quick and Seamless Integration

We consistently add new integrations, each of which takes just a few minutes to set up. Integration documentation is provided directly inside the platform.

### Streamlined Implementation

During the onboarding process, we provide hands-on support to ensure smooth implementation and minimal use of time and resources.

### Minimal Cost of Ownership

Once Onyxia is implemented, little to no maintenance required other than taking advantage of future platform updates. If any troubleshooting is required after initial set up, we are always available to provide support.

### Customization at the Platform's Core

Every organization and security program is unique. We make it easy for CISOs to select and fully customize Cybersecurity Performance Indicators (CPIs) SLAs, Security Stack Mapping, board reporting, and AI-driven insights.

## About Onyxia Cyber

Onyxia Cyber is on a mission to empower Chief Information Security Officers and security leaders with the ability to continuously strengthen their security programs and proactively reduce risk exposure. Our intelligent Cybersecurity Management Platform, which delivers powerful predictive insights, provides real-time security assessment and benchmarking, full security stack visibility, and streamlined board reporting.

**With Onyxia, CISOs gain a simplified way to ensure organizational compliance, improve risk management, and align their security initiatives with business goals.**

**From Reactive to Proactive to Predictive.**
